1. Welcome to ColorOS 6.0

Welcome

2. Safety Information

Read through the following information carefully. Failure to follow these safety precautions could result in danger or illegal activities.

Safe Startup

Do not switch on the device when phone use is prohibited or when it may cause interference or danger.

Traffic Safety First

Traffic safety is always of first importance. Use of phones and headphones while driving a vehicle or riding a bicycle is not recommended and is illegal in some areas. Obey and follow all related local laws.

Switching off Device at Gas Stations

Turn off your phone when in any area with a potentially explosive atmosphere, such as gas stations or any other fueling area. Sparks in such areas could cause an explosion or fire, resulting in serious injury or even death.

Switching off Device When On Board an Airplane

Wireless devices might be prohibited while in the air in some countries or regions. Obey all related local laws and turn off your phone or switch to airplane mode.

Switching off Device near Medical Equipment

Hospitals or healthcare facilities might use radio-frequency-sensitive equipment. Obey the relevant rules and regulations.

Switching off Device at Blasting Areas

To avoid interfering with blasting operations, turn off your phone when in a "blasting area" or in areas posted "Turn off two-way radio." Obey all signs and instructions.

Radiation

Nearly every electronic device gives off radiation. Mobile phone use does not increase the risk of getting brain cancer or other head tumors. Its effect in humans is negligible.

Interference

Nearly every electronic device is susceptible to interference for external sources if inadequately shielded or designed. As a result, your phone may cause interference with other devices.

Temperature

Operate your phone in a place where the temperature is always between 10℃ to 45℃. Using or storing your phone in a too hot or too cold environment might damage the battery, or even cause your phone to short-circuit or burn.

Proper Usage

Use your phone appropriately. Do not touch the antenna area unnecessarily when the phone is turned on. Do not drop, disassemble, crush, bend, deform, puncture, incinerate, or insert foreign objects into your phone.

Qualified Maintenance and Service

Never attempt to repair or modify the phone yourself. If your phone has any hardware or software failure, do not use it until you take it to an authorized service provider. Do not disassemble or root your phone yourself, otherwise the warranty service will be terminated immediately.

Batteries, Chargers and other Accessories

Do not dismantle the built-in lithium-ion battery of your device. Use only the batteries, chargers and other accessories authorized by OPPO, for third-party accessories might cause damage or danger.

Waterproofness

Your device is not waterproof. Do not use your device in rain, or other wet locations.

Avoiding Hearing Damage

Permanent hearing loss may occur if the receiver, speakerphone, headphones, or earpieces are used at high volume. You can adapt over time to a higher volume of sound that may sound normal but can be damaging to your hearing. Set the volume to a safe level to protect your hearing.

Avoiding Eyestrain

Your device's screen color and brightness might have a different degree of stimulation to your eyesight. Long-term viewing of your phone in normal or darker environments will damage your eyesight. When watching video or reading text on your phone, avoid prolonged use, take breaks and turn on eye protection mode to prevent eyestrain.

Glass Parts

The outside cover of your phone's screen, front/rear camera and flash is made of glass. This glass could break if your phone is dropped on a hard surface or receives a substantial impact. Do not attempt to touch or clean the broken glass. Stop using your phone until the glass is replaced by an authorized service provider.

Connecting to Other Devices

Before connecting to other devices, carefully read the user manual for more detailed, accurate and safety instructions. Do not connect to incompatible products.

Being Aware of Laser Safety

If your phone supports laser focusing, carefully read the user manual before using it. Failure to follow instructions might lead to harmful radiation exposure. To prevent direct exposure to laser beam, do not attempt to open your phone's outer shell, or avoid keeping close contact with laser light.

3. Get started

3.1. Quick Look

3.1.1. ColorOS 6.0 Features

New look, Best experience

Easy on the eyes. Smartest features as of yet. A new look. A more bold and intuitive icons to make browsing fun and exciting. Moving forward to greatness.

A more intuitive user interface

ColorOS 6.0 has been created with style in mind. Changing the entire look of the user interface has been one of the main upgrades so each feature, app, or function will have its own charm. You can have fun just by tinkering your OPPO phone. You will definitely notice a better looking Setting, Volume, Notification Bar, app icons, fonts for numbers on the dial pad and more!

New Fonts, Better spacing

We don't want you to miss or strain your eye when you are navigating or browsing the settings on the phone or when looking on your contacts. The fonts are bigger and there are enough space for each so your eyes won't miss

any detail.

Control Center

Easy to see its bigger icons. Added more colors to categorize each feature. It's a lot easier to look for the feature that you would want to enable and disable.

Notification Center

You may now hide those notifications just by choosing Unimportant Notifications so you will have a cleaner and spacious look on the screen.

Volume Setting Look

Changing volumes is now more intuitive with its bigger icon. Your finger easily fits to adjust volumes of ringtone, media, and alarm. It's also beside the volume buttons so it’s not that hard to miss.

Riding Mode

Safety is non-negotiable. We always make sure the wellbeing of our users either by driving motorcycle or when they do their favorite hobby like cycling. If this is enabled, incoming calls will be muted so you won’t be tempted to check your phone while on the road.

Home Screen Mode

You can now choose how you want your apps displayed on your Home Screen. You can choose between Standard mode and drawer mode.

Static and Live Wallpapers

Amazing Wallpapers to choose from. More than the Static Wallpaper which has variations of sophistication. You can also choose to have a Live Wallpaper running on the background.

VOOC 3.0

Charge in a flash. It's faster and dependable.

Hyper Boost

Best gaming experience. More stable but at the same time helps you save power as well.

ColorOS 6.0 is compatible with these devices

Model

Reno Series, F11 Pro, F11, A1k

Note: Not all devices are released in all countries or regions.

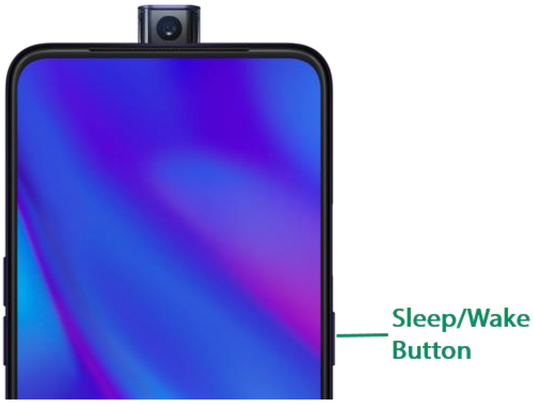
To learn more features, see Quick Look at OPPO phone.

3.1.2. Sleep/Wake Button

The **Wake/Sleep** button on the right side of your phone has a number of different uses.



When the phone is on

Wake or lock the screen: With the phone is powered on, press the **Wake/Sleep** button once and it will wake the phone up to the point that you can see the Lock Screen, like the clock and any notifications that are setup to display there. When the phone screen is awakened, pressing this button will blacken the screen and lock the phone.

Take a screenshot: Press and hold the **Sleep/Wake** and **Volume Down** buttons at the same time and your phone will take a picture of whatever is displayed on the screen. Tap the screenshot, and then choose to a take a long screenshot, send, edit or delete the screenshot. If you save the screenshot, you can view it on Photos.

End a call: Go to **[Settings]** > **[Additional Settings]** > **[Accessibility]** and turn on **[Power Button Ends Call]**, then you can press the **Sleep/Wake** button to end phone calls.

Turn off the phone: Press and hold the **Sleep/Wake** button for a few seconds, whether the phone is on the Lock Screen or Home Screen, it will ask you to slide down to power off the device.

Force restart the phone: Press and hold the **Sleep/Wake** and **Volume Up** buttons for about 10 to 12 seconds until your device is turned on. View force restart your phone.

Wake up Google Assistant (Siri): Press and hold the **Sleep/Wake** and **Volume Up** buttons for about 0.5 seconds to wake up Google Assistance. View Waking Up Google Assistant.

When the phone is off

Turn on the phone: Press and hold the **Sleep/Wake** button for a few seconds until you see the OPPO logo.

Force Restart the phone: Press and hold the **Sleep/Wake** and **Volume Up** buttons until your device is turned on. View force restart your phone.

Enter Recovery Mode: Press and hold the **Sleep/Wake** and **Volume Down** buttons at the same time to enter Recovery Mode.

3.1.3. Menu, Home, and Return Buttons

An upgrade with the on-screen virtual navigation keys which also offers fast and fluid gestures to operate your phone. You can change the order of the virtual keys, and set them to appear only when needed to free space on the screen.

Enable virtual navigation keys. Virtual navigation keys are default on. If you want to enable them manually, go to **[Settings]** > **[Convenience Aid]** > **[Navigation Keys]** and tap **Virtual Keys.**

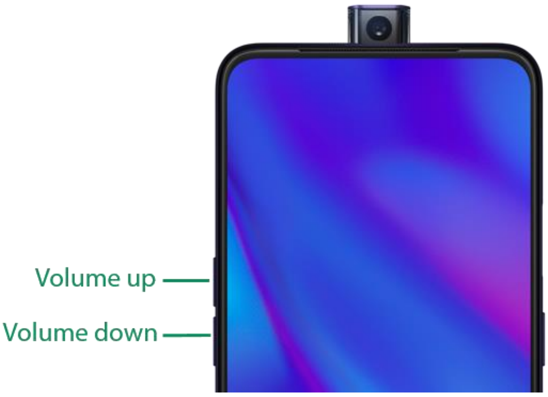
3.1.4. Volume Buttons

Volume buttons give you easy access to adapt over time to a proper volume of sound. It refers not simply ringer or media, the phone also keeps track of the volume level separately in headphone, microphone, and speaker.



Volume up
Volume down

Media volume: When listening to music, videos and phone calls, use the buttons on the side of the phone to adjust the volume. For information about avoiding hearing loss, see Security Information.

Ringer volume: Use the Volume buttons to control the volume for the ringer and alerts. When you press and hold the **Volume down** button, your phone will switch to silent mode.

Alarm volume: Use the Volume buttons to set the volume for alarm. The alarm still plays a sound when the phone is in silent mode.

Call volume: When making or receiving phone calls, use the volume buttons to adjust the volume of the call.

* You can also adjust the volume (except call volume) in **[Settings]** > **[Sound & Vibration]**.

Controlling the camera: Volume buttons can also be used to control your camera. Go to **[Settings]** > [**System Apps**] > **[Camera]** > **[Volume Button]** and set up the volume buttons for Shutter or Zoom.

3.1.5. Micro-USB Port

Micro-USB port is the connector on the bottom of your device where your battery charger connects. It also doubles as the data port, which lets you transfer data to and from a personal computer or other USB devices. Plug the cable in the port to charge or transfer data.

Notice:

1. Repeated connecting and disconnecting of your cable can cause the port to wear out, resulting in a poor connection to your cable.

2. Never force a connector into the port, for that might cause damage.

3.1.6. Headset Jack

The headset jack is an audio socket that accepts a 3.5mm audio plug. Plug your headset in the jack to listen to music, videos and phone calls. Do not force a mismatched headset into the jack for that might cause damage.

3.1.7. SIM and SD Cards

SIM card

* Insert the SIM card before turning on your phone. If you hold a new SIM card, you might need to wait until it is activated by the carrier before you can use it.

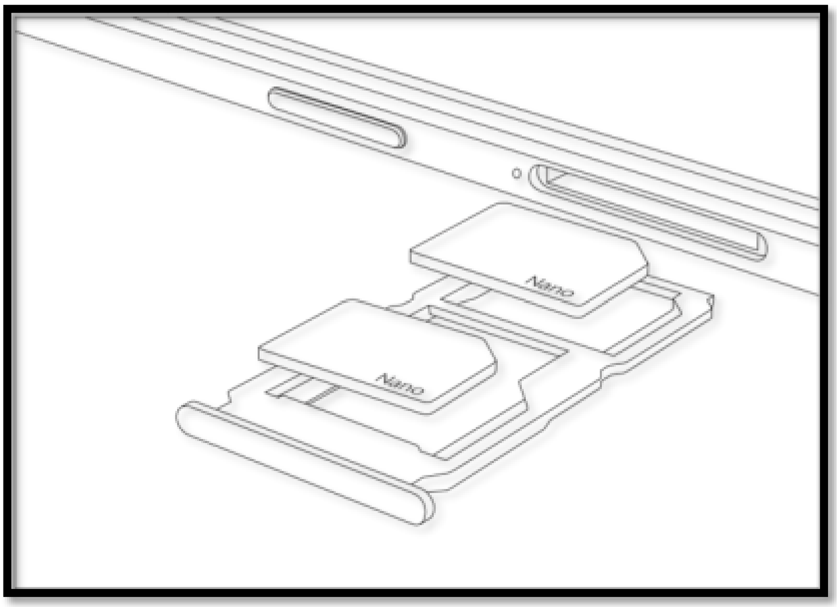
A SIM card is provided by your carrier and is used to activate your phone's mobile network. Because it has a small amount of memory, the SIM card not only enables communications between two persons but stores information such as phone numbers, security data and more. When using the mobile network, you need to pay charges. To avoid high charges, you can shop data plans with your carrier, or shop international data roaming plans when traveling abroad.

Insert the SIM card: Most OPPO Smartphones support Dual SIM. You can choose to insert one or two.

1. Insert the card needle into the hole outside the card tray to pop it open.

2. Pull out the card tray and place SIM card(s) on it.

3. Put the card tray back in as the same orientation that you removed it.



Remove the SIM card: Remove the card(s) in the same way that you insert it (them).

SD card

The SD card is a way to store and transfer images, music, video, and other data. You can insert a SD card in your phone to expand phone's memory.

SIM1, SIM2 and SD cards share the same card tray. Insert your SD card in the same way that you insert the SIM card(s).

3.1.8. Accessories that Came with OPPO Phone

Along with the handset, the accessories came with are headset, USB Connecting cable, Power adapter, SIM card tool, and Phone case.

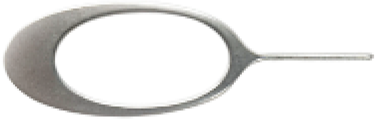
Notice： All photos shown are for illustration purpose ONLY. Actual products may vary due to product enhancement.

Headset: A standard headset with 3.5 mm headset plug. Use to listen to music, videos, and phone calls. Use the built-in microphone to talk. When playing the music or videos, tap the button once to pause or play a song or video.

USB Connecting cable: Use the cable to connect your phone to the computer to charge and transfer files, or use it with the power adapter to charge.

Power adapter: Connect the power adapter to your phone using the included cable, then plug it into a standard power outlet to charge the phone.

SIM card tool: Use to pop out the SIM card tray.

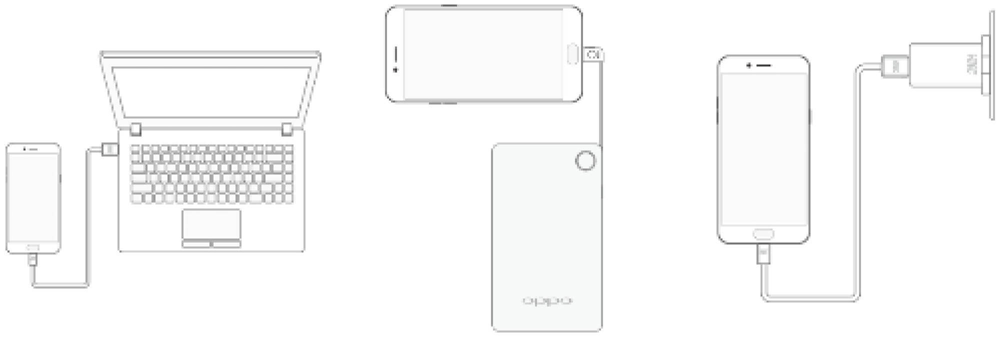


Phone Case: Use to protect against drops and shock damage on the corners and rear of your phone.

Note：All photos shown are for illustration purpose ONLY. Actual products may vary due to product enhancement.

3.1.9. Charging the Battery

How to charge the battery:



Note：All photos shown are for illustration purpose ONLY. Actual products may vary due to product enhancement.

Charge with the jack: Connect adapter to your phone using the USB cable, then plug it into a standard power outlet to charge the phone.

Connect to a computer to charge: Use the cable to connect your phone to the computer to charge. Your phone will charge slowly if you connect it to the computer.

Charge with Power Bank: Connect Power Bank to your phone, and your phone will be charged wherever you go. It is an absolute necessity if you are a frequent traveler.

Charging Notice:

1. Charge the phone with the original charging accessories (including adapter, cable and power bank).

2. It is recommended to charge your phone in a place where the temperature is between 15° C to 40° C. Extreme ambient temperatures will affect flash charging system.

3.1.10.Gesture & Motion

Gestures

OPPO smartphone is designed to understand gestures. You can use gestures such as tap, draw, and slide to operate on your phone.

To set up complex gestures for specific functions, go to **[Settings]** > **[Convenience Aid]** > **[Gesture & Motion]**

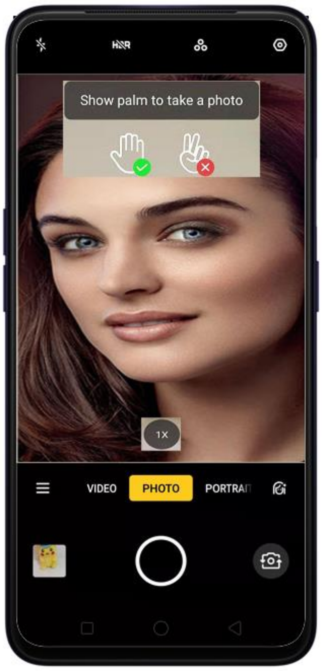
Take selfies

Open Camera app and switch to the front camera. Use hand gesture towards the camera, once the camera captures that, it will take a photo automatically after two seconds. You can change your pose and expression within this two seconds.

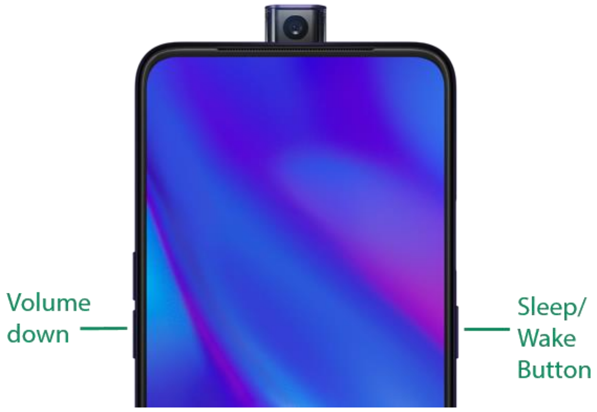


3.1.11.Key Combinations

Generally, you can use two buttons of your phone to generate a specific result. The common key combinations include:

When phone is on

Press and hold the Power and Volume Down buttons: Your phone will take a screenshot for the current page. To take a long screenshot, tap the screenshot, then tap Longshot.

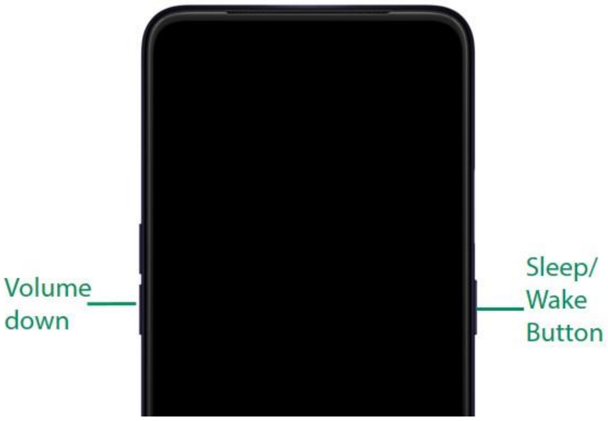


Volume down
Sleep/ Wake Button

Press and hold the Power and Volume Up buttons: If the phone isn't responding, press and hold the button combination for at least eight seconds to force restart your phone.

When phone is off

Press and hold the Power and Volume Down buttons: Phone will enter Recovery Mode, which helps to update the system, wipe data, and check disk and more.



Volume down
Sleep/ Wake Button

Press and hold the Power and Volume Up buttons: Phone will be force restarted. Press and hold the two buttons until your phone is turned on.

3.1.12.Status Icons

The icons in the status bar at the top of the screen give information about your OPPO smartphone:

Status icon		What it means
📶	**Mobile network signal**	Shows whether you're in range of operator's network and can make and receive calls. The more bars, the stronger the signal.
✈	**Airplane Mode**	Shows that airplane mode is on. Phone's wireless communication abilities are disabled.
4G / 4G$^+$	**LTE/ LTE – A**	4G network is available, including LTE and LTE-A. Your phone can connect to the Internet over that network.
3G/H$^+$	**UMTS/WCDMA**	3G UMTS network is available. Your phone can connect to the Internet over that network.
E	**EDGE /GSM**	EDGE (GSM) network is available. Your phone can connect to the Internet over that network.
📶	**Wi-Fi**	Shows that your phone is connected to a Wi-Fi network. The more bars, the stronger the signal. See Connect to Wi-Fi.
☎	**Call Forwarding**	Call forwarding is turned on.
VPN	**VPN**	You're connected to a network using VPN.
☾	**Quiet Time**	Quiet Time is turned on.
🔒	**Portrait orientation lock**	Phone screen is locked in portrait orientation.
⏰	**Alarm**	An alarm is set up on your phone.
✱	**Bluetooth**	Bluetooth is on, or your phone is connected to a Bluetooth device.

	Bluetooth	Bluetooth Tethering is on.
	Silent	Silent Mode is on.
	Vibrate when silent	Phone vibrates when Silent mode is on.
HD	**HD Voice**	Your phone is on a voice call over VoLTE.
	Wireless Display	Wireless projector is connected.
	Location Service	Location Service is on.
	No service	Your phone has no signal.
	Power Saving	Power Saving Mode is on.
LOGG -ING	**LOGG-ING**	Get a log for testing
	Message	**Message notification**
Vo LTE	**Voice over LTE**	Your operator's VoLTE service is available. HD Voice works to make your calls.

	Kids space	Addiction prevention
	Payment protection	Payment environment detection

3.2. Configuration Settings

3.2.1. Fingerprint, Face and Passcode

Setting a lockscreen passcode, privacy passcode, and face ID on your device are security measures that all users should take. Follow these steps to set a passcode that will be needed to unlock your phone and access the information stored on it.

Use a Lock Screen passcode on your OPPO phone

Set the Lock Screen Passcode
1. Go to **[Settings]** > [**Fingerprint, Face & Passcode**], enter [**Lock Screen Passcode**], tap [**Turn on Passcode**].
2. You'll be prompted to enter a 6-digit numeric code. If you want to use other passcode types, Tap **Other Encryption Methods.**

3. Choose from four types of passcodes:

- **Pattern Code**: Allows you to draw a pattern with at least four dots connected.
- **4-Digit Numeric Passcode:** Allows you to set a numbers-only passcode that contains four characters.
- **4-16 Digit Numeric Passcode:** Allows you to set a numbers-only passcode that contains four to sixteen characters.
- **4-16 Digit Alphanumeric Passcode:** Allows you to set a passcode that contains four to sixteen numbers and/or letters as your preference.

4. Draw your pattern or enter your passcode.

5. Re-draw or re-enter your pattern or passcode to confirm it and activate it.

Change the passcode

1. Go to **[Settings]** > **[Fingerprint, Face & Passcode]**, enter your passcode then tap [**Modify Passcode**].

2. Draw or enter your current pattern or passcode.
Draw or enter your new pattern or passcode. If you want to use other passcode types, tap **Other Encryption Methods** at the bottom of the screen.
Re-draw or re-enter your pattern or passcode to confirm it and activate it.

Turn off the passcode

1. Go to [**Settings**] > [**Fingerprint, Face & Passcode**], enter your passcode then tap [**Disable Passcode**].
2. Draw or enter your current pattern or passcode to confirm.
View more details in Set and use a passcode with your OPPO smartphone**.**

Privacy Passcode

When this is turned on, the validation will be used for all privacy features such as App Lock and Private Safe.

1. Manage Privacy Passcode: Go to **[Settings]** > **[Fingerprint, Face & Passcode]** > [**Privacy Passcode**] then tap **Turn on Privacy Passcode** create an encryption code, then set or customize a security question, then tap **Done**.
Note: The security question can be used to reset the passcode.

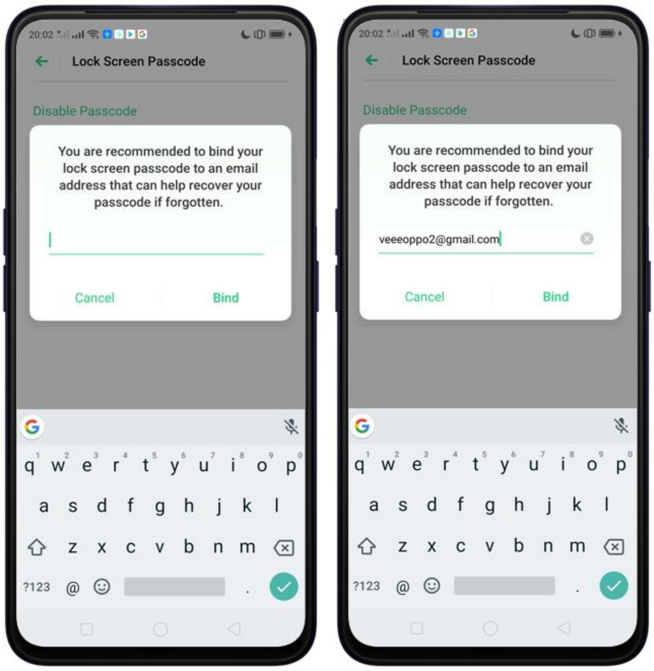
What is the name of one of your teachers? ●
What is your mother's name? ○
What is your father's name? ○
What is the name of your high school? ○
What is the name of your favorite restaurant? ○
Custom Question

2. Change or turn off privacy passcodes: Go to [**Settings**] > [**Fingerprint, Face & Passcode**] > [**Privacy Passcode**] enter the encryption code then tap [**Turn off Privacy Passcode**] or [**Modify Privacy Passcode**].

3. Modify the security questions: Go to [**Settings**] > [**Fingerprint, Face & Passcode**] > [**Privacy Passcode**] enter the encryption code tap [**Modify the Security Questions**] enter the encryption code again then set or customize a new security question, tap **Done**.

4. Bind security email address: The email used will be able to retrieve the privacy passcode: Go to [**Settings**] > [**Fingerprint, Face & Passcode**] > [**Privacy Passcode**] enter the encryption code tap [**Bind Security Email Address**] enter the encryption code again then enter email address, tap **Use**.

5. Update bind security email address: Go to [**Settings**] > [**Fingerprint, Face & Passcode**] > [**Fingerprint, Face & Passcode**] enter the encryption code tap [**Bind Security Email Address**] tap **Change Email Address** then enter the encryption code again, enter the new email address, tap **Use**.



You are recommended to bind your lock screen passcode to an email address that can help recover your passcode if forgotten.

You are recommended to bind your lock screen passcode to an email address that can help recover your passcode if forgotten.

veeeoppo2@gmail.com

Associate OPPO ID

1. Go to [**Settings**] > [**Fingerprint, Face & Passcode**] > [**Privacy Passcode**] enter the encryption code toggle [**Associate OPPO ID**] Register or Sign in with your OPPO ID credentials.   See OPPO ID

2. App Lock: Go to [**Settings**] > [**Fingerprint, Face & Passcode** > [**Privacy Passcode**] enter the encryption code tap [App Encryption] select the apps to be encrypted then press **Enable Encryption**. Once it is encrypted, you will see a padlock symbol on the app that has been encrypted. Also, see App Lock.

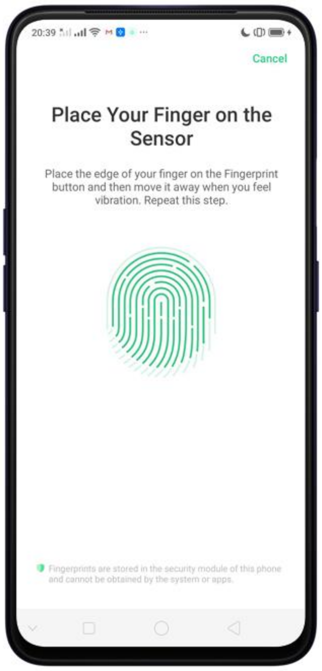
Note: You have to enter an encrypted passcode and a security question before you can use the other functions on Privacy Passcode.

Use a fingerprint on your OPPO phone

Before you can add a fingerprint, you need to create a passcode for your OPPO phone. You can use fingerprints for:

Unlocking the phone from the Lock Screen.

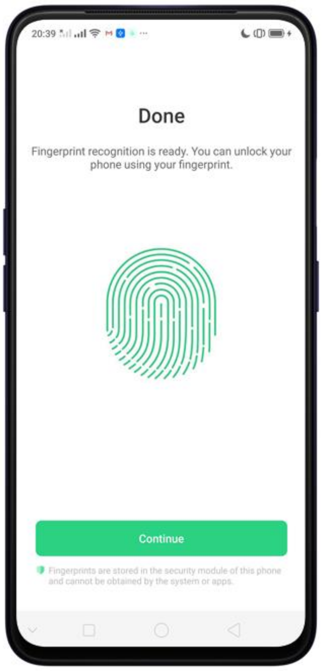
1. Go to [**Settings**] > [**Fingerprint, Face & Passcode**], tap [**Add a Fingerprint**].
2. Follow the on-screen instructions, placing your finger gently on the Home button until your fingerprint is recorded.



Place Your Finger on the Sensor

Place the edge of your finger on the Fingerprint button and then move it away when you feel vibration. Repeat this step.

Fingerprints are stored in the security module of this phone and cannot be obtained by the system or apps.



Done

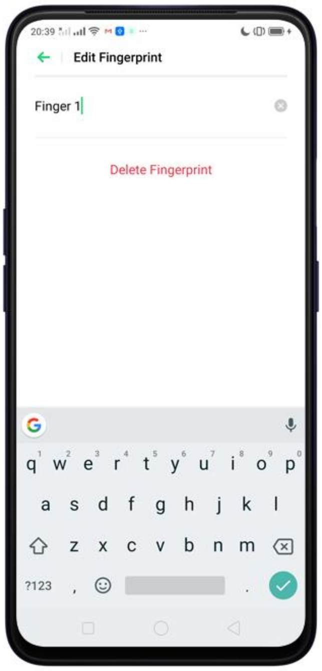
Fingerprint recognition is ready. You can unlock your phone using your fingerprint.

Fingerprints are stored in the security module of this phone and cannot be obtained by the system or apps.

Repeat steps 1 and 2 for as many fingers as you like.

Delete or Rename a fingerprint

1. Go to [**Settings**] > [**Fingerprint, Face & Passcode**], tap the fingerprint you've added.
2. Enter a name for your fingerprint or tap [**Delete Fingerprint**].

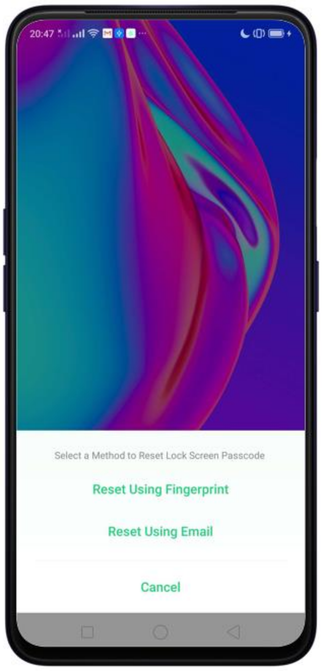


Edit Fingerprint
Delete Fingerprint

Finger 1

Reset Passcode methods

When you forgot your Lock Screen passcode, there are two ways you can recover it.



Select a Method to Reset Lock Screen Passcode
Reset Using Fingerprint
Reset Using Email
Cancel

1. **Reset Using Fingerprint.** Just tap on Forgot Passcode at anytime, and put the correct finger on the fingerprint button. Note: You must have enrolled a fingerprint to use this method.

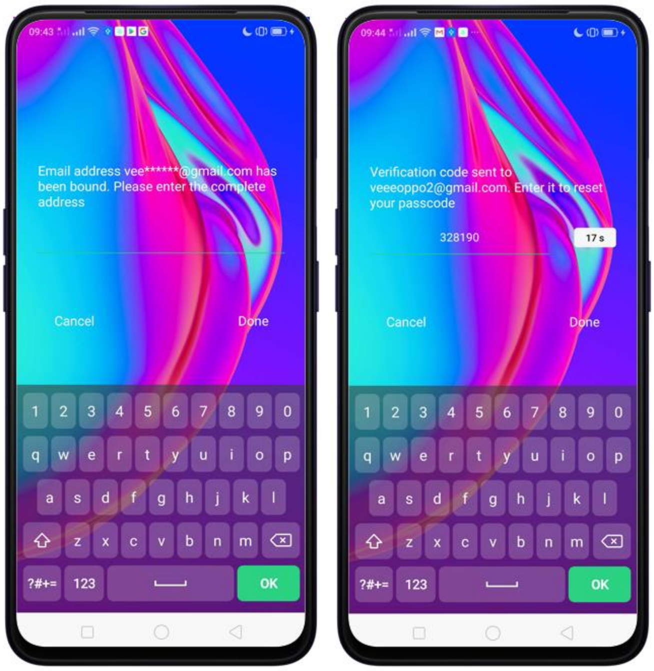
Cancel

Place your finger on the fingerprint sensor, then enter your new passcode and confirm it.

2. Reset Using Email. When you have forgotten your lockscreen passcode and you also haven't enrolled face recognition or for some reason, it did not work, you can still reset the password as long as you have bounded your security email address at the initial phase of password creation. See bind security email address.

How to reset password using bind email:

1.Enter the email address that you have bounded on the phone, then enter the verification code that was sent thru your email, tap **Done**. Now you can set a new lockscreen passcode for your phone.



Email address vee******@gmail.com has been bound. Please enter the complete address

Verification code sent to veeeoppo2@gmail.com. Enter it to reset your passcode

328190

Enroll a Face on your OPPO phone

Before you can add a face you need to create a passcode for your OPPO phone.
You can use face for:

- Unlocking the phone from the Lock Screen.
- Encrypting apps
- Protecting files

Enroll a face

1. Go to [**Settings**] > [**Fingerprint, Face & Passcode**], tap [**Face**].

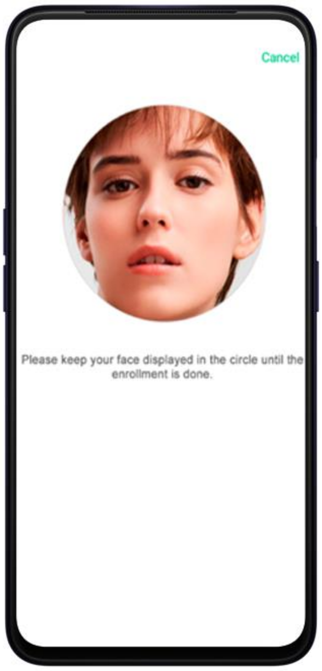
Enroll Facial Info

For the best results, keep the device 20cm to 50cm from your face and avoid surroundings that are too bright or too dim when enrolling.

Continue

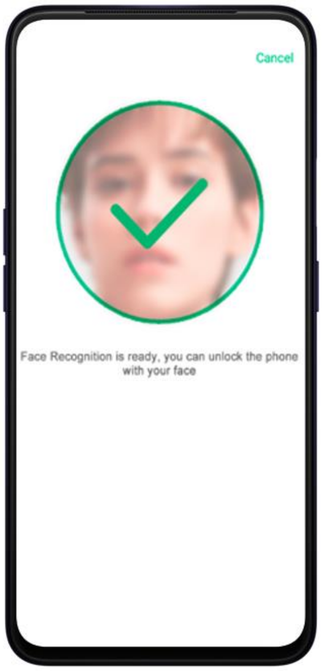
Facial info is stored in the security module of this phone and cannot be obtained by the system or apps.

2. Follow the on-screen instructions. To get the ideal effect, keep the phone 20-50cm away from your face and position your whole face in the circle until the enrollment is done. Avoid very bright or dim environment when enrolling your face.



Cancel

Please keep your face displayed in the circle until the enrollment is done.



Cancel

Face Recognition is ready, you can unlock the phone with your face

Delete Enrolled Faces

Go to [**Settings**] > [**Fingerprint, Face & Passcode**], tap [**Delete Enrolled Face**]. Use Face for screen unlocking, App Lock and File Safe. Go to [**Settings**] > [**Fingerprint, Face & Passcode**] > [**Use Face to**], then turn on the features you want to use.

View more details in Add and use a fingerprint on your OPPO Smartphone.

Note: Not all phone's running on ColorOS 6.0 supports fingerprint. It still depends on the design of the phone.

3.2.2. Set Up Other Mail and Calendar Accounts

If you want to use other mail and calendar apps, add the accounts to your phone to let the apps associated with those accounts sync with your phone.

Set up an account. Go to **[Settings]** > **[Accounts and Sync]**, then tap **[Add Account]**.

Repeat the steps for as many accounts as you like.

3.2.3. Transfer Data from the Old Phone to OPPO Smartphone

You can transfer over all of your data - with no risk or loss of quality, using **Clone Phone**. With **Clone Phone**, you don't need to leave any of your data behind with your previous device. Take it all with you in three easy steps:

From an iPhone to an OPPO Phone

1. On your device, go to **[Tools]** > **[Clone Phone]**, then select "This is the new phone" and "Import From an iPhone". Connect your phone to the Internet when promoted.

4.2 Volume Setting Look

Changing volumes is now more intuitive with its bigger icon. Your finger easily fits to adjust volumes of ringtone, media, and alarm. It's also beside the hard volume buttons so it’s not that hard to miss.

To change volumes for the ringtone, media, or alarm, press first either the Volume Up or Volume Down button so the volume setting will show. Then you may swipe up and down to manage the volume.

4.3 Riding Mode

Safety is non-negotiable. We always make sure the wellbeing of our users either by driving motorcycle or when they do their favorite hobby like cycling. If this is enabled, incoming calls will be muted so you won't be tempted to check your phone while on the road. When "Riding Mode" is turn on, all notifications except for incoming calls will be muted by default. You can manage people who can call you as well.

4.13 VOOC 3.0

Waiting for hours to charge your phone is a thing of the past. With VOOC 3.0, you can power up your phone in a flash.

Understanding VOOC 3.0
VOOC (Voltage Open Loop Multistep Constant-Current Charging) is a fast charging technology found by OPPO. The new VOOC 3.0 relies on higher current to maximize its charging efficiency, better than its previous version.

How does VOOC 3.0 works?
VOOC 3.0 can fully charge a battery 20 minutes faster than VOOC 2.0. It uses lower voltage, saving the phone from overheating, even when playing a video or game while charging. VOOC 3.0 reaches full charge 20 minutes faster than its previous version. Enjoy your fully charged OPPO phone.

VOOC
Flash Charge

4.14 Smart Assistant Upgrade

Smart Assistant has been given a new look and now has a category for some features. It categorizes into Mine, Recommended, Life, and Convenience.

To enable/disable Smart Assistant on the Home Screen. Go to [Settings] > [Smart Service] and turn on [Smart Assistant]. Or swipe right from the left edge of the Home Screen, then tap [Turn on Smart Assistant].

5. Basics

5.1 Use Apps

Open apps

The Home Screen shows all the apps on your phone. Tap any application icons to get started.

Apps will show the number of messages pending to be read in red on the Home Screen icon.

If you're using Swipe Gestures, see Navigation Gestures.

Quick Actions

Press and hold an app icon to bring up "Quick Actions," which offers shortcuts to specific features within that app. When the menu appears, tap the shortcut you would like to use, then the app will open directly to that feature.

For example, go to your Home Screen and press and hold on the icon for the Camera app, you'll see a mini menu that lets you jump straight to Portrait Shooting, Beauty Selfie, Video Recording, or the App Info page.

5.2 Share from Apps

In addition to sharing your information from the Files app, you can also share from many other apps on your device.

Share from apps. In many apps, you can tap Send or ⋖ to choose how to share your information. The choices vary depending on the app you're using. Additional options may appear if you've downloaded apps with multiple sharing options.

Take the Photos app as an example, tap ⋖ and you'll see all the sharing options.

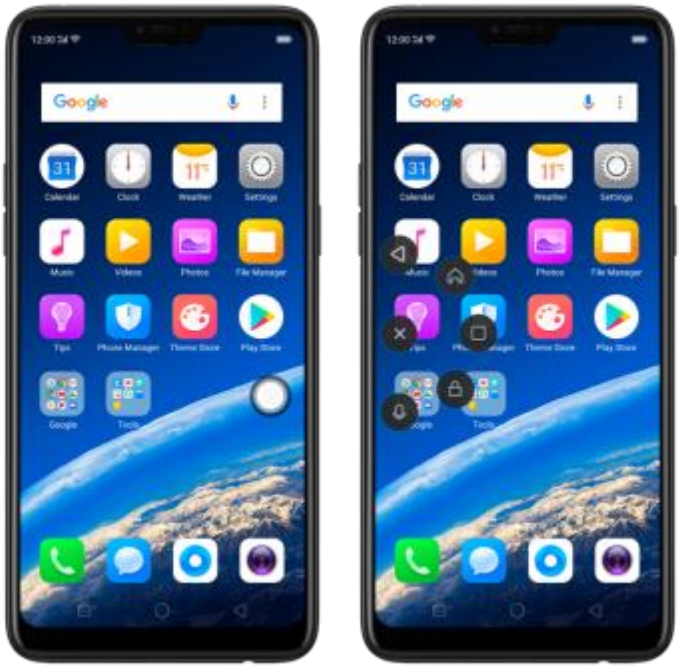
Hide Gesture Guide Bar. Gesture Guide Bar is the translucent line at the bottom of the screen, which allows you to quickly distinguish the left, middle, and right swipe-up regions. To hide the guide bar, turn on **[Hide Gesture Guide Bar]**.

Prevent mistakenly touching. Turn on **[Mistouch Prevention]**. To use gesture navigation when the app is in Landscape Mode, you need to swipe up to bring up the guide bar first, then swipe up again in the same area.

5.6.2. Assistive Ball

Applying the Assistive Ball feature provides options to access several regular phone features through the touchscreen, rather than the tactile buttons. It enables you to use the virtual navigation keys with just one finger, and also open the notification center, take a screenshot, and more. When you perform gestures that are difficult for you, Assistive Ball can help.



Assistive Ball lets you perform a wide range of features:

- Return to upper page
- Go to the Home Screen
- View recent tasks
- Open Notification Center
- Lock the screen
- Enter One-hand Mode
- Take a screenshot

To configure the Assistive Ball menu, go to **[Settings]** > **[Convenience Aid]** > **[Assistive Ball]**, then choose one operation mode:

Gesture Operations. You can assign different actions like single tap, double tap, or touch and hold. For example, assign “Home” to “Touch and hold”, then you can long press the Assistive Ball to go to the Home Screen.

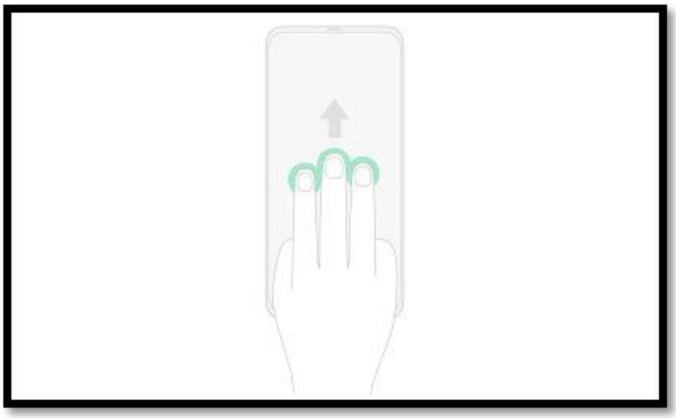
Hey man..how's the game going?

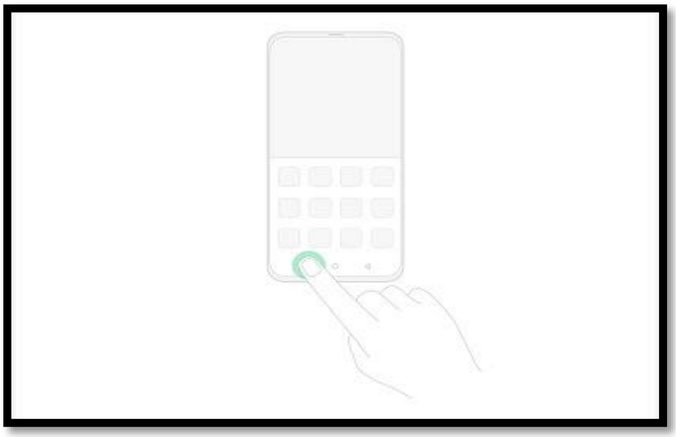
Use Split-screen. Go to **[Settings]** > **[App Split-screen]**, then turn on **[App Split-screen]** and **[Swipe up with 3 Fingers for Split-screen]**. There are four methods to enter Split-screen mode:

Note: Both apps need to support Split-screen function. Your phone will alert you if the app doesn't support that.

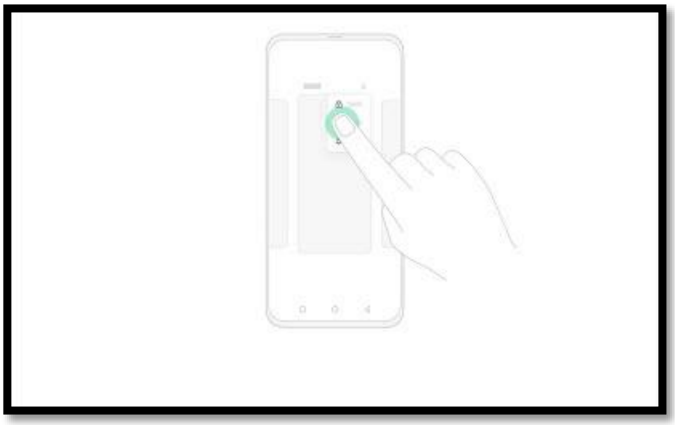
1. Under the interface of an app, swipe up the screen with three fingers to enter split-screen mode.



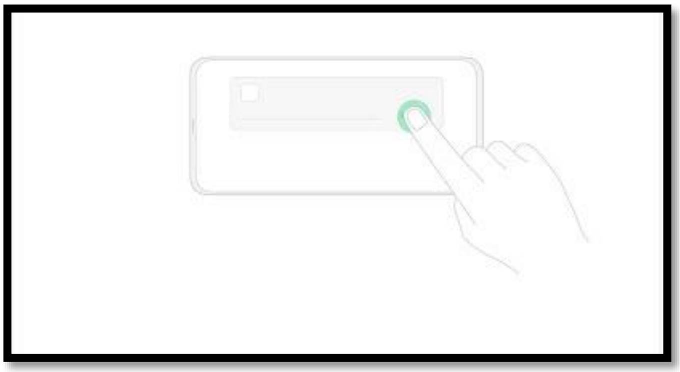
2. Under the interface of an app, press and hold the Multitask button to enter split-screen mode.



3. In recent tasks screen, swipe down a task card, then tap the “Spilt-screen” button to enter split-screen mode.



4. When you use an app in landscape mode and receive a message from other apps, tap “Split-screen Reply” to enter split-screen mode.



5.10 Take and Edit a Screenshot

You can capture the screen on your OPPO smartphone using the following ways:

Capture the current page

- **Press and hold the Power and Volume Down buttons** for about 2 seconds, the screen will briefly flash white, and you'll hear a shutter sound if your phone's sound is on.

Capture a long screenshot

You can easily take longer and scrolling screenshot with simple taps. Long screenshot allows you to take scrolling screenshot of your conversations on messaging apps or a full webpage.

To capture long screenshots:

1. **Press and hold the Power and Volume Up buttons** for about 2 seconds, or swipe down the screen with three fingers to take a screenshot of the current page.
2. Tap the screenshot, tap **Long Screenshot**, **then** scroll the page up or down and stop whenever you want to.
3. Tap **Done** to generate a long screenshot. The image is saved in the **Photos** app.

Edit a screenshot

After you've taken a screenshot, tap it, then tap **Edit**. You can use the fancy new markup features to optimize it instantly, such auto-enhance, crop & rotate, filters, stickers, and more. Choose your options by tapping ☑ then tap **Done** to save your changes.

5.13.1 Type, Edit, and Delete Text

Type text

Tap a text field to pop up the keyboard, then tap the letter to type.

Type capital letters. OPPO smartphone is auto-capitalizing the first letter of a sentence, or you can tap ⬆ to type capital letters.

Turn on Caps Lock. Double-tap ⬆ . A line will appear under the arrow if you have done this correctly.

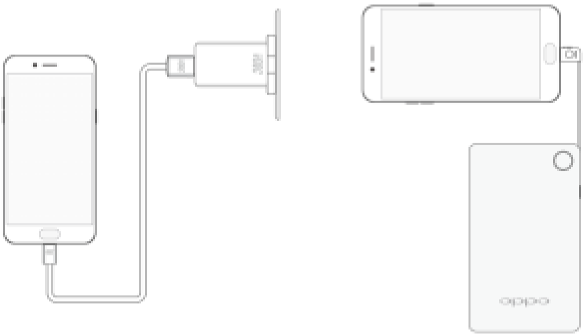
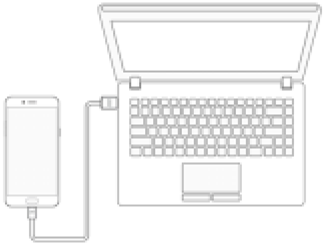
Real Sound Technology. Real Original Sound Technology is jointly developed by Dirac Research AB and OPPO. It delivers original sound in full fidelity and creates a spatial three-dimensional sound arena to provide you with a listening experience that's just like being at a live performance. Plug in the headphones then select a scene you want the sound to change to.
Headphones Monitor. When turned on, you can enjoy a live karaoke experience in real-time through your headphones.
Note: Turn off the default headphones monitor function in the karaoke app to avoid sound problems.

5.15 Charge and Monitor the Battery

OPPO smartphones are equipped with a non-removable, lithium-ion rechargeable battery. Do not attempt to open your phone. Charge the phone using the cable and USB power adapter that's included when you purchased it.
Charge the battery. Connect your phone to a standard power outlet or a Power Bank.



Charge the battery and transfer files. Connect your phone to a computer.



Note:

* All photos shown are for illustration purpose ONLY. Actual products may vary.

* Rechargeable batteries have a limited number of charge cycles and may eventually need to be replaced. The OPPO smartphone battery is not user replaceable; it can only be replaced by an authorized service provider. **Removing the battery yourself will void your warranty and might cause damage to your phone**.

Show percentage of battery in the status bar. Go to **[Settings]** > **[Notification & Status Bar]** and turn on **[Battery Percentage]**. Or go to **[Settings]** > **[Battery]** and turn on **[Show battery percentage on status bar]**.

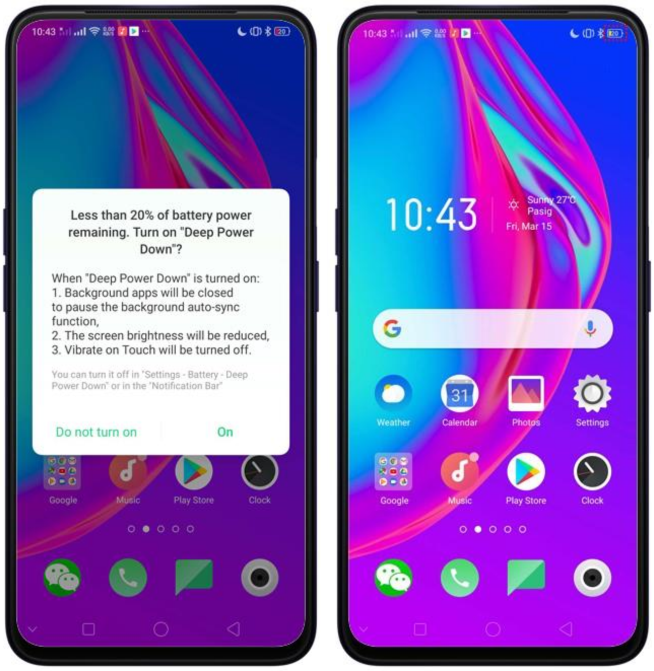
5.17 Use the phone internationally

When you travel overseas, stay connected to friends and family while traveling - without paying more than you have to. Follow these suggestions.
Unlock your phone. Call your wireless operator and ask if your phone needs to be unlocked. In order to prevent being overcharged, call the Customer Service Center to get the unlock code.
Shop international data roaming plans with your operator. Consult your operator or visit online websites to check roaming plans and fees that are mostly used in the country or region that you will visit.
Buy or rent local Nano SIM cards. You can buy or rent SIM cards for most of the countries and regions. Learn more from travel guides and websites related to the country or region.
Use Wi-Fi. Turn off global roaming on your phone and head to a Wi-Fi hotspot, such as those in hotel lobby, or local cafes.

5.18 Power Saver

Power Saver helps increase battery life by turning off or limiting certain features, for example, turning off some background apps to pause background syncing, turning off Vibrate on Touch, and dimming the screen. Using Power Saver can give you at least extra 30 minutes to use the phone.

Turn on Power Saving. The phone will let you know when your battery level goes down to 20%, and again at 10%, and will ask you to turn on Power Saving. The battery indicator is on the top right corner will turn **yellow** while Power Saving is enabled.



Less than 20% of battery power remaining. Turn on "Deep Power Down"?

When "Deep Power Down" is turned on:
1. Background apps will be closed to pause the background auto-sync function,
2. The screen brightness will be reduced,
3. Vibrate on Touch will be turned off.

You can turn it off in "Settings - Battery - Deep Power Down" or in the "Notification Bar"

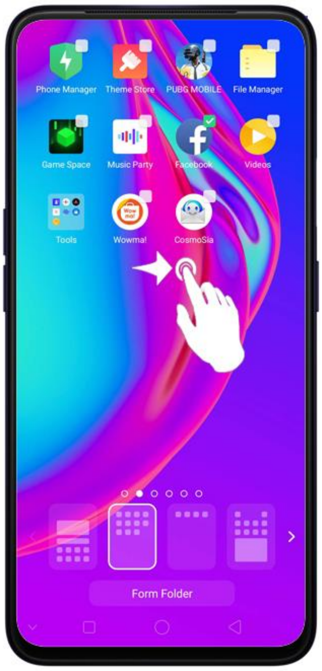
6.2.Personalize the Home Screen

6.2.1. Organize the Home Screen

From the Home Screen, you can access all your apps and widgets. To keep everything in order, you can organize your Home Screen to make it more manageable and ~~keep it~~ looking neat.

Add or Remove a Home Screen page

Add a Home Screen page. Swipe to the rightmost screen and drag an app or widget off the screen to the right.



Phone Manager
Theme Store
PUBG MOBILE
File Manager
Game Space
Music Party
Facebook
Videos
Tools
Wowma!
CosmoSia
Form Folder

Remove a Home Screen page. Drag all the apps and widgets on a Home Screen page to another page. The empty Home Screen page will be automatically deleted.

Group apps

You can put apps in folders, which can keep your Home Screen neat or help to organize similar apps.

Create a folder. Tap and hold an app until the icons start wiggling. Drag one of the apps into the other, and lift your finger when the first app seems to merge into the second one. Add more apps by dragging them in.

Rearrange apps and folders

OPPO smartphone has set a default arrangement for users, but you can still rearrange the apps and folders to fit how you use your phone.

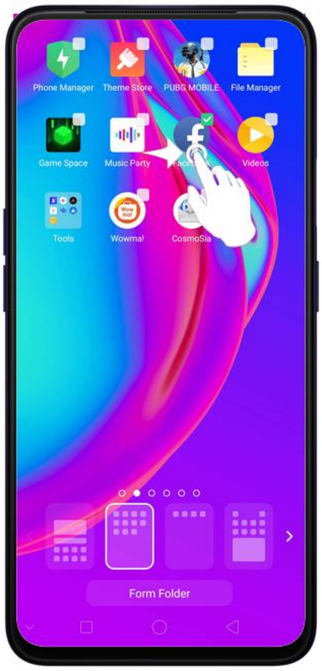
Remove apps from a folder. Tap the folder, then tap and hold-an app until the icons start wiggling. Drag the app out of the folder and into the Home Screen.

Delete a folder. Drag all the apps out of the folder and into the Home Screen, and the folder will disappear.

Rearrange apps. Tap and hold ~~on~~ an app until the icons start wiggling. Drag and drop the app icon to a new location. To save your changes, press the **Home** or **Return** button.

Note: Icons will be aligned to the left automatically.

Move the icon to a new screen. Drag the icon of the screen to the right and let it go when the new page appears.



Add or remove Home Screen widgets. See Home Screen widgets.

6.2.2. Home Screen Widgets & Transition Effects

You can give yourself a fancy Home Screen with a highly-detailed set of widgets, for example, clock, weather, battery or mail widgets. You can also use them to tweak notifications, alarms and other options. In other words, there's considerably more here than just widgets. You can also change the transition effect on your phone, which is the style in which you slide the Home Screen right or left.

Manage Home Screen

Add a widget. Pinch your fingers together, then tap **[Widgets]**. You'll see all available widgets. Touch, hold and drag one widget to the screen. Make sure there is enough space for that widget.

16:26

The Czech Republic Has A Cool Nickname

Ding Manman

1/3

Don't fret: You can still call it the Czech Republic if you really, really want to. But the Czech government asks that you use "Czechia" instead. The name switch was a move to hopefully make it easier for "companies and sports teams, among others, to represent the country internationally (and, possibly, for fans to tweet about it)," according to a write-up on Atlas Obscura.

6.5.Adjust the Screen Brightness and Color Temperature

Protect your eyes and adjust color temperature according to your preference. Reducing screen brightness can also help to conserve battery life.

Adjust the screen brightness. Swipe up from the bottom of the screen to open Control Center, then drag ☀. Or go to **[Settings]** > **[Display & Brightness]**, then drag the slider.

Turning this feature on is recommended to prevent eye strain and extra power consumption caused by long-time high screen brightness.

Set OPPO phone to adjust screen brightness automatically. Open **Control Center**, then tap A or go to**[Settings]** > **[Display & Brightness]**, then toggle the **Auto-Brightness** slider to green. If Auto-Brightness is on, your phone adjusts the screen brightness for current light conditions using the built-in ambient light sensor.

Use Night Shield. Go to **[Settings]** > **[Display & Brightness]** > **[Night Shield].** Drag the control point to adjust color temperature. The warmer you set your screen, the less blue light will be emitted from the display. When you use the OPPO phone at night, you can turn on Night Shield to cut down on eye strain and the sleeplessness you might get.

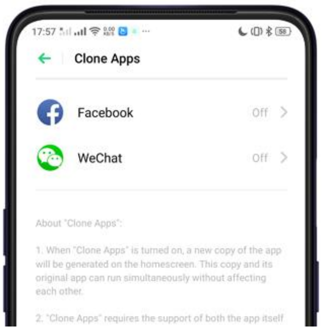
6.10. Clone Apps

Clone Apps allows an app to run two accounts on a single phone.
To turn on **[Clone Apps],** go to **[Settings]** > **[Clone Apps]**, choose an app and turn on **[Enable App Cloning]**. A new copy of this app will be generated on the homescreen after Clone Apps is enabled. This copy and its original app can run simultaneously without affecting each other.

1. "Clone Apps" works only if both the app itself and the phone supports it. If a cloned app does not work properly, it means that the function or operation is not supported by the app or phone.

2. "Clone Apps" currently does not support data transfer between a cloned app and a computer.

3. "Clone Apps" currently does not support to run more than two app clones simultaneously.



17:57

6.11. Manage Default App

What is Default App? If you've installed two different applications that essentially do the same thing, for example, Google Chrome and Firefox Web Browser, you'll likely be presented with a pop-up menu when trying to open a web page, asking you which application you'd like to complete the action with. You can manage your default app and never be bothered when performing that action again.

Manage Default App. Go to **[Settings]** > **[App Management]** and tap **[Default App]**. Take **[Browser]** as an example, there are three apps and you can choose one of them to be the default one. You are suggested to use the original apps to get the best performance.

6.14. App Display in Full-screen

Adjust your app layouts. Go to **[Settings]** > **[Display & Brightness]** > **[Full-screen Display]** toggle the sliders to green if you want the apps to display in full-screen. Or you can open an app, then tap “Tap full-screen display.” App will restart when you turn on this feature.

Note: Turning on "Full-screen display" will improve your experience, but it may cause display issues due to incompatibility or other reasons.

7. Apps

7.1. Phone

7.1.1 Make and Answer Phone Calls

Make a call

To make a call and talk to your friends, you can manually enter a phone number on the dialer, choose a number on your Contacts or Favorites, or tap one of the recent calls.

Note: The signal indicator at the upper-left corner of the screen shows whether you're in range of your operator's network and can make and receive calls. The more bars, the stronger the signal.

Dial the number you want to call. Tap Phone, tap the keypad to enter the number, then choose the SIM you want to make a call (if you are 2 SIM cards). Tap

⌫ if you made a mistake. You can also copy a phone number and open the keypad, then tap the number to paste it to the keypad.

Besides, if you're not sure what the exact phone number is, you can quickly search the contact by dialing the numbers that contain the contact's name or initial letters on the keypad. For example, if you want to call Ollie, tap "655" and you'll see the contact.

7.1.4. Emergency Calls

What is emergency Number?
Emergency numbers are numbers of emergency services which provide immediate help during Medical emergency, Threat to life, Fire, Accidents.

In many countries, the public telephone network has a single emergency telephone number (sometimes known as the universal emergency telephone number or occasionally the emergency services number) that allows a caller to contact local emergency services for assistance.

You can make an emergency call even if you do not have a SIM card installed on your OPPO smartphone.

Make an emergency call. Tap Phone, tap keypad and dial the number, then tap ☎. If your phone is locked with a passcode, tap **Emergency Call**, then dial the emergency number.

7.1.5. Emergency SOS

Emergency SOS is a feature that helps you dial emergency numbers and send out SOS messages quicker and more conveniently when in time of need or other fortuitous events.

To use the Emergency SOS feature, go to [Settings] > [Emergency SOS] > Read terms and conditions > [Agree] or [Cancel] if you don't accept the terms & conditions.

Emergency SOS

1."Emergency SOS" is a feature aimed to help you make emergency calls and send out SOS messages more conveniently.

2.When "Emergency SOS" is enabled, you can try to dial the emergency number by repeatedly pressing down the Power button for 5 times.

3.You can set up your emergency contacts in "Emergency SOS - Emergency Contact Number-My Emergency Contacts". Following an SOS call to your emergency contact, you can choose to send the emergency contact an SOS message that can contain your location, scene pictures taken by the front and rear cameras, and scene recording.

4.When you move over 200m in one minute, your new location will be updated to your emergency contacts.

5.To stop sending your updated locations to your emergency contact continuously, you can tap the status bar and disable "Emergency SOS".

6. Note: Whether your SOS messages can be

Press the Power Button Repeatedly for Emergency Call

Press the power button 5 times in succession to initiate an SOS emergency call.

Auto Dial the Default Number

When initiating an emergency call with the Power button, your phone will call the default number you set after a 3s countdown.

Send SOS Message

Send Pictures of Surroundings

Send a 5s Audio Recording of the Surroundings

After an SOS emergency call, you can send to MY EMERGENCY CONTACT an SOS message that shows your current location.

My Emergency Contact. After an SOS emergency call, you can send to **MY EMERGENCY CONTACT** an SOS message that shows your current location.

Note: Please note that sending SOS message accurately still depends on your location, environmental factors, network connectivity, if GPS is available and the conditions of you and your emergency contact's devices (including but not limited to battery level). Also, SOS messages might generate additional charges. Please contact your carrier for details.

Privacy concerns. Once Emergency SOS is activated, this will automatically be permitted to:

1. Access your location.
2. Read, write, or delete external storage.
3. Read your phone status.
4. Take photos.
5. Record sounds.
6. Read your contacts.

7.1.6. Carrier’s Call Settings

Your device includes several calling features such as Call Forwarding, Call Waiting, Voicemail**,** and more.

Set up calling features. Go to **[Settings]** > [**System Apps**] > **[Call]** > **[Carrier Call Settings]**.

- **Voicemail**: When you're away or can't get to the phone, your Voicemail does the answering for you. Callers can leave recorded audio messages to you, and you can view, listen to, and manage the messages.
- **Fixed Dialing Numbers**: Add numbers to the FDN list, and when activated, FDN restricts outgoing calls to only those numbers listed, or to numbers with certain prefixes.
- **Call Forwarding**: An incoming call will be redirected to another telephone number where the desired called party is able to answer. Notice that ☎ appears on the status bar.
- **Call Barring**: Certain types of outgoing calls (such as international calls) and/or incoming calls will be restricted.
- **Additional Settings**: Includes your SIM number/s and Call Waiting where when enable makes you hear short beeps if someone calls you while you’re on **a** call.

Please ask the other party to turn on "OPPO Share" in Notification Bar.

Backup your contacts. Go to **[Settings]** > **[Additional Settings]** > **[Back up & reset]** > **[Backup & Restore]** > **[Create New Backup]**. View Back up your OPPO smartphone.

7.6.6.Back Up your Contacts

We use our phone on a regular basis and it is best to back up contacts so that you can easily restore them or use them on another device.

Use the built-in backup tool. Go to **[Settings]** > **[Additional Settings]** > **[Back up and reset]**, then tap **[Backup and Restore]**. Back up your contacts. You need to make a copy of the existing backup file and move it to another storage device.

1. Backup of application data is currently not supported to ensure data security.
2. Wiping data or erasing phone contents and settings will delete the backup data in your phone storage (Path: Phone Storage – Backup). Therefore, copy the backup data to external storage or your PC before performing these operations to avoid data loss.

Export contacts. Export your contacts to your SIM card or a folder on your phone. See Import and export contacts.

7.6.7.VIP Contacts

When you put the phone into Silent mode, or when you set the phone to block calls and notifications using Quiet Time, Game Acceleration, or Anti-harassment, you can add certain contacts to VIP Contacts, which will allow them to override the phone settings and have their calls come through and ring.

Add contacts to VIP Contacts. Go to Contacts, select a contact, and then tap Add to VIP Contacts.

7.10. Photos

7.10.1. Photos Overview

The Photos app is where you store your photos and videos, including those you've taken with the built-in camera, saved from an app or a webpage, copied from optional storage devices, and more. You can view, share, and edit your photos and videos directly on your phone.

View Photos. You can view the roll of photos in either Camera or Photos. All photos are sorted by the dates and time~~s~~ they were taken. In Photos, select Year or Month view in timeline to quickly lock the look-up scope. Tap an album to view the photos or videos on that album. You can also pinch the screen to zoom in and out

7.10.2. Albums

Each time you take a new photo, by default, it gets stored in the Photos album. Within the Photos app, there are a number of default albums into which your photos get automatically organized. In addition to these, you can also create your own albums ~~in~~to which you can organize photos further.

You can see your photo albums by tapping **Albums** at the bottom right of the Photos app.

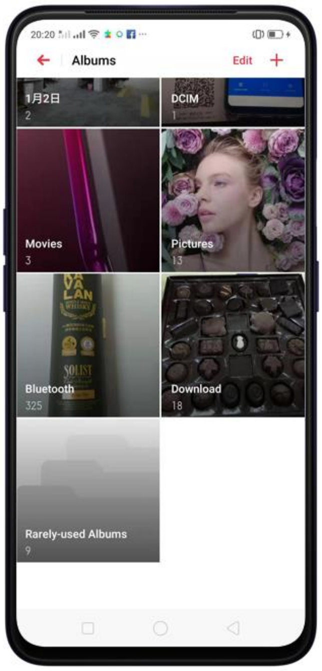
Smart album search and cleanup. You can search your photo library depending on the date, location, people, and content of the photos on your device. In Phone Manager, you can also clean up photos in batches such as similar and blurry photos. See Clean Up Storage

Optimized album management

- In addition to the frequently used social apps, images downloaded from third-party apps will be saved in Rarely-used Album. You can put other images into Rarely-used Album by tapping an image then tap ⊕ Add to > **Set as rarely-used**.



- Your photos will be put into sequential order by modification time. In other words, once an old photo or video has been modified, it will be saved as the latest photo or video.
- Photos downloaded from spam applications will be controlled by phone's blacklist and will not be displayed in albums.

Note: Memories and Stories are terms that can be interchangeably used and doesn't affect the full functionality of the phone.

7.10.3. Stories / Memories

Using the on-device facial recognition and AI detection of what's on your images, your phone can combine photos into themed mini-movies complete with transitions and a soundtrack. For instance, it will put together an album about your last vacation in Europe, or an album of your kids growing up. You can also edit them and share them with others.

Play a Memory movie. Choose **Memories**, tap a Memory, then tap ▶. The movie will play in landscape mode by default. To pause, tap the movie, then tap II.

Note: Your phone categorizes your photos weekly while your phone is plugged and locked.

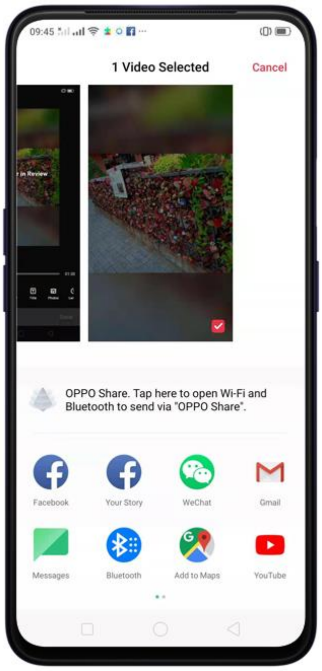
- **Change the theme**: Tap Theme, then tap a theme or swipe the themes left or right to pick a new one, such as Joyful, Cozy, and more. For each theme, there is a music of the Memory movie.

- **Choose different music**: Tap Music, then swipe the music left or right to pick a new one. You can also use your local and saved music.
- **Choose a cover**: Tap Cover, then tap the photo you want to use.
- **Edit the title**: Tap Title, edit the title, then tap Save.
- **Choose or delete photos**: Tap Photos, tap +, then select the photos you want in the movie. Tap 🗑 to remove the photos from the movie.
- **Change the movie length**: Tap Length, then scroll the wheels to change the length.
- **Share a Memory movie**. Tap a Memory while it's playing then tap ⋖ then tap Send.



1 Video Selected

OPPO Share. Tap here to open Wi-Fi and Bluetooth to send via "OPPO Share".

Note: Memories and Stories are terms that can be interchangeably used and don't affect the full functionality of the feature.

7.10.4. People

In the Photos app, there's an album called "People." It uses facial technology to identify the people in the pictures or those with combine identifications, then group pictures of the same people together. You can name or rename a People album, hide People albums, merge People albums into one, and more.

Note: Your phone generates People album while your phone is plugged and locked.

Add photos to a People album

Tap a People album, tap **More People**, and select the photos you want to be added on the album, then tap **Display.**

Hide, display, and merge People albums

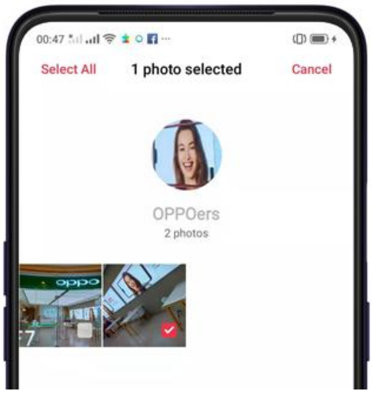
Hide People albums. Open the People albums, then **Select** > **Hide**. The hidden albums are collected in **More People**.
Display People albums. To display the hidden albums, tap **More People**, tap Select and choose the people you want to display, then tap **Display**.
Merge People albums into one. Tap **Select**, select at least two People albums, and then tap **Merge**.

Remove misidentified photos from an album

Tap an album you want to remove photos from, tap **Select**, select the misidentified photos, and then tap **Wrong Person**. The photos will be moved to **More People**.

Set a cover of the People album

Tap an Album, tap the portrait, then choose the photo you want as the cover.



Note: Memories and Stories are terms that can be interchangeably used and doesn't affect the full functionality of the phone.

7.10.5. View and use photos and videos

View your photos and videos. Tap Photos, and then tap a photo or video. Tap ▶ to play a video. Or tap Camera, and then tap the thumbnail on the lower-left corner of the screen.

View a photo at full screen. Tap a photo, and then tap the screen to hide the controls.

View the next or previous photo. Flick left or right.

View a photo in landscape orientation. On Control center, turn [**Portrait Orientation]** off, then rotate your phone sideways. The photo automatically reorients and, if it's in landscape format, expands to fit the screen.

Zoom in or out. Double-tap or pinch a photo to open or closed. Drag to see other parts of the photo.

See photo and video details. Tap a photo or video, tap More and choose **Details**.

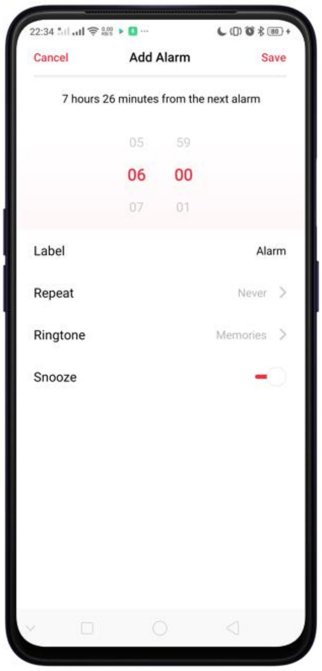
7.14. Clock

7.14.1. Set Alarm Clocks

Time to set up that alarm and never be late again. You can also set multiple alarms, set each alarm to repeat on days you specify or to sound only once.

Set an alarm. Tap **Alarm** and tap +, scroll wheels to change the time then tap **Save.**

Note: You'll be given the exact time before the alarm will turn on.



7 hours 26 minutes from the next alarm

Label Alarm

Repeat Never

Ringtone Memories

Snooze

Manage alarm settings.

- To give the alarm a description, tap **Label**. Your phone displays the label when the alarm sounds.
- To set the alarm to repeat on certain days, tap **Repeat** and choose the days.
- To choose the ringtone that sounds when the alarm goes off, tap **Ringtone**.
- To set whether the alarm gives you the option to hit snooze, turn **Snooze** on or off. If Snooze is on and you tap Snooze when the alarm sounds, the alarm stops and then sounds again in five minutes.

Pseudo Base Station Blocking
Blocked 1 Fake Base Station

Set the privacy passcode before using "Private Safe"

Once successfully set, this passcode will be used for all privacy functions such as App Encryption and Private Safe.

Cancel Set Passcode

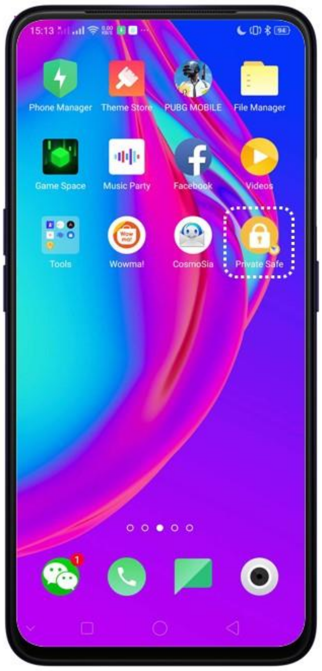
OTHER SECURITY FEATURES

Secure Keyboard

The system automatically switches to the OPPO Secure Keyboard when you are entering sensitive information such as passwords. OPPO Secure Keyboard does not record your input, connect to the Internet, or autocomplete words. This ensures that your input is not leaked.

2. **Manage files on Private Safe**: Go to [**Settings**] > [**Security**] > [**Private Safe**] enter the passcode that you have set, and then manage files that you want to be kept private.

Files that can be added in Private safe are **Photos**, **Videos**, **Audios**, **Documents**, and other **Files** that are supported by the app.
You can also create a shortcut on your Home Screen for easy access.



7.16. Calculator

7.18. Compass

You can use the compass app to quickly find the direction you're facing.

Calibrate the compass when prompted. Move away from the interference and spin your phone in the pattern of an infinity symbol.

Find your direction. Turn on Location Service first, then tap Tools folder on the Home Screen, tap Compass, and you can quickly find your direction, see your latitude and longitude.

8. Safety & Privacy

8.1. Device security

8.1.1. Lock Screen password

Security on your device begins on Lock Screen. You can set a passcode that will be needed to unlock your phone.

Set, change, or turn off the passcode. Go to **[Settings]** > **[Fingerprint, Face & Passcode]**. You can draw a pattern, use a 4-Digit, 6-Digit, or 4-16 Digit Numeric Code or 4-16 Character Alphanumeric Code.

Please Enter Passcode
Other Encryptions
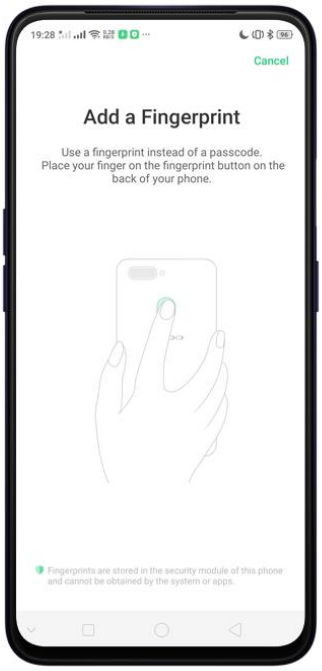
Pattern Code
4-Digit Numeric Code
4-16 digit numeric passcode
4-16 character alphanumeric passcode
Cancel

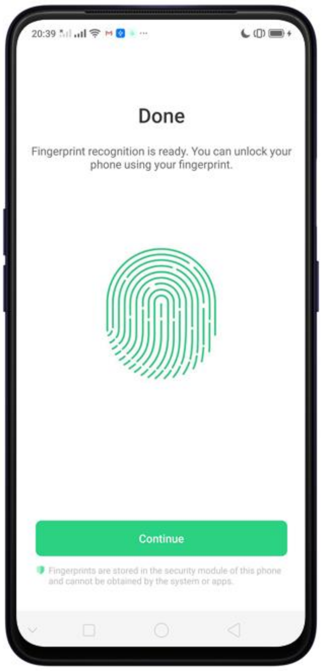
Add a fingerprint. Before you can add a fingerprint, you need to create a passcode. You can use the fingerprint to unlock the phone. You can add up to 5 different fingerprints on your phone.



Add a Fingerprint

Use a fingerprint instead of a passcode. Place your finger on the fingerprint button on the back of your phone.

Fingerprints are stored in the security module of this phone and cannot be obtained by the system or apps.



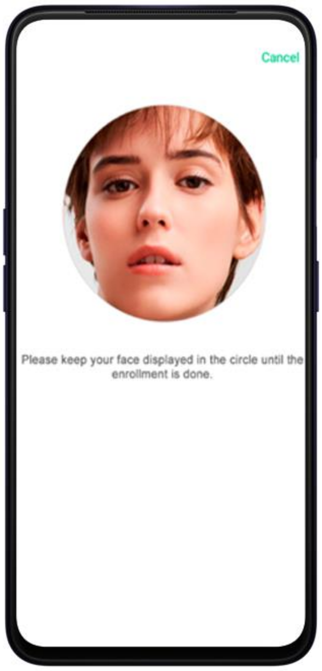
Done

Fingerprint recognition is ready. You can unlock your phone using your fingerprint.

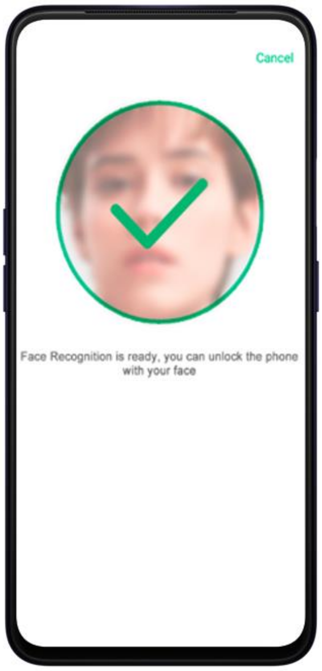
Fingerprints are stored in the security module of this phone and cannot be obtained by the system or apps.

Enroll face. Before you can enroll a face, you need to create a passcode. You can use the face to unlock the phone instead of the fingerprints or passcode. You can enroll only one face on your phone.

View more about setting a passcode, face ID and fingerprint on your OPPO phone, see Fingerprint, Face and Passcode.



Please keep your face displayed in the circle until the enrollment is done.

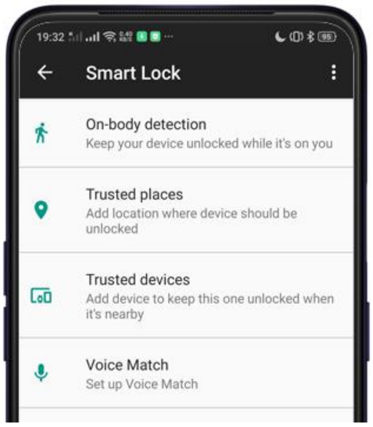


Face Recognition is ready, you can unlock the phone with your face

8.1.2. Smart Lock

Smart lock is an easy and handy way to gain access to your phone. It keeps your

phone unlocked when it is safe with you.
Turn on Smart Lock options. Go to **[Settings]** > **[Additional Settings]** > **[Device & Privacy]** > **[Smart Lock]**, then enter your phone passcode.



19:32

Smart Lock

On-body detection
Keep your device unlocked while it's on you

Trusted places
Add location where device should be unlocked

Trusted devices
Add device to keep this one unlocked when it's nearby

Voice Match
Set up Voice Match

- **On-body detection**. Once enabled, your device will be kept unlocked while it's with you, like when you are holding it or carrying it. Your device will lock when it detects that it's been set down, like putting it on **the** table or is away from your body.
- **Trusted places**. If you have added trusted places, your device will be kept unlocked when it's nearby those areas. For example, if you have added your home as a trusted place and you're 80m away from your house the device will be kept in unlocked mode.
- **Trusted devices**. If you have added trusted devices, for example, your Bluetooth watch, your car's Bluetooth system, when they are connected, your device will be kept in unlock mode. (Note: Bluetooth connections have a range of up to 100 meters.)
- **Trusted voice**. Say "OK Google" and save it on your Google account. When you say "OK Google" the next time, your device will be unlocked once it recognizes your voice.

Note: When Smart Lock is on, your phone will remain unlocked if you're carrying the phone, which will quickly drain your phone's battery. This will also lead to accidental **commands** if you put the phone in your pocket. Therefore, if you want to use Smart Lock, use it wisely and properly.

8.1.3. Payment protection

While you shop online, your OPPO phone will provide protection for the mobile transactions, such as detecting the system, captcha and, app security. You can see the detected information of the current payment environment on the upper-right corner of the screen.

8.1.4. Set up a SIM card lock

For better security, you can set up a SIM card lock. The SIM lock will make sure that only those who know the password can use the phone.

Set up a SIM card lock. Go to **[Settings]** > **[Additional Settings]** > **[Device & Privacy]** > **[Set up SIM card lock]**. Tap the slider next to Lock SIM Card, type in the PIN code and then tap OK.

Note: If the wrong PIN is entered more than three times, both your SIM card and phone will be locked. You can enter the PUK code to unlock them. See About SIM card PIN & PUK code.

Change the SIM card PIN code. Tap Change SIM PIN, type in the current PIN code, tap OK. Then you can type in the new PIN code, tap OK, retype your new PIN code when prompted, then tap OK.

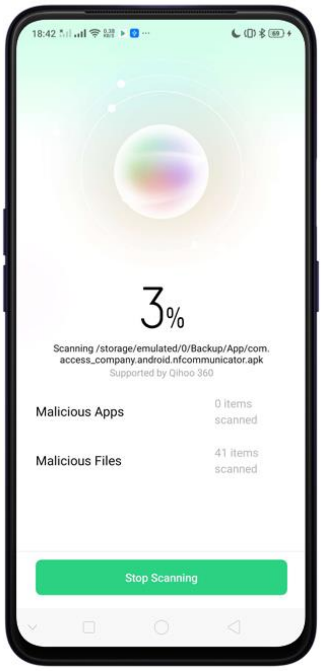
8.1.5. Virus Scan

For better security, you should regularly scan and remove potential and actual threats to your phone.

Scan for virus. Tap Phone Manager, then tap Virus Scan. Wait for the scan to complete. If threats were found, remove them; if not, you will see a message that says your phone is in a good state.



3%

Supported by Qihoo 360

Malicious Apps	0 items scanned
Malicious Files	41 items scanned

8.1.6. Pseudo Base Station Blocking

Your phone might receive many spam messages (including investment advice, promotional messages, and more), or be infected by mobile viruses sent from the pseudo base stations. When these stations are identified, your phone will automatically block the information sent by them, thus safeguarding and securing your information.

Block pseudo base stations. Go to **[Settings]** > **[Security]** > **[Pseudo Base Station Blocking]** and you will see a list of pseudo base stations if they are identified and blocked by the phone.

8.1.7. Protect Personal Information

Apps automatically read your personal information to access restricted functions, while most of these information are sensitive, such as call history, contacts, messages, and calendar events; some apps will probably engage in malicious activities like uploading or exposing your private data and monitoring your activities. By using this feature, when an app tries to read information that it needs, your phone will provide empty information instead of what you really have, which helps you protect your privacy.

Protect your call history, contacts, messages, and events. Go to **[Settings]** > **[Security]** > **[Personal Information Protection]**, then choose an option.

You will see a list of apps that require the certain information. If you don't want to give an app your real information, switch the app slider to green, then tap **[Turn on feature]**. Your phone will then provide empty information.

Change the permission. You can go through each permission or app on your phone and, with full control, allow, forbid or limit each permission according to your requirements.

- **Allow**: Always allow the app to use the required permissions.
- **Forbid**: Disable the required permissions completely for the app.
- **Ask**: Every time you start the app, it asks you to grant the permissions that are required.

8.2.3. Hide Home Screen Icon

Without deleting the app from your phone, you can simply hide the app icons from the Home Screen.

Before you can hide Home Screen icons, you must first setup Privacy Lock.

Hide Home Screen icon. After encrypting the apps, do the following:

1. Go to **[Settings]** > **[Security]** > **[App Encryption]**, then enter the verification passcode to enter the App Encryption screen.
2. Tap an app, turn on **[Start Passcode Verification]**, then turn on **[Hide Home Screen icon]**.
3. A pop-up message will display on the screen to ask you to set an access number. You can open the hidden applications by dialing the number. This message will only pop up when you use the hidden feature for the first time. Tap **Set Access Number**.
4. Set a number that starts and ends with "#" and contains one to sixteen characters, then tap **Done**.

Note:

- You can override encryption passcode and open hidden apps directly by dialing the access number.
- Apps that aren't displayed in Recent Tasks can be closed using the one-tap cleanup function.
- Access number can be set only once when you use the hidden feature for the first time. If you forgot the number, reset the phone to its factory settings to reset the number.

8.2.4. Kids Space

With Kids Space, parents can set limits especially for the children's use of the phone, such as setting up phone usage time and apps that are allowed to be accessed. It does a good job in charge prevention, system modification, and addiction prevention when your kids use the phone.

Set up Kids Space. Go to **[Settings]** > **[Security]** > **[Kids Space]**. Select the apps your kids can access, set how long they can use the phone, and choose whether to use cellular data, then tap **Enter Kids Space**.

Note: You need to turn Lock Screen passcode before you can enter Kids Space.

Screen Pinning Off

8.3.3. Privacy Protecting and Security Warning

The phone provides several measures in place to protect your privacy and security.

Privacy protecting

When you're typing with Secure Keyboard, viewing Private Safe, or using other privacy-related features, you will not be able to capture or record the screen. If you try to capture the screen, the phone will alert you "Cannot capture screenshot. The page contains personal information." If you try to record the screen, you will only record a black screen.

Security warning

Some Android malware can spy on your activities in the background and can take pictures or make recordings without notifying you, resulting in leaking of the information. With Security Warning function, your phone will remind you every time the malware performs these activities.

Prevent apps from taking pictures in the background. A warning window will pop up on your phone screen.

Prevent apps from making recordings in the background. If any app starts the sound recorder, the status bar turns red.

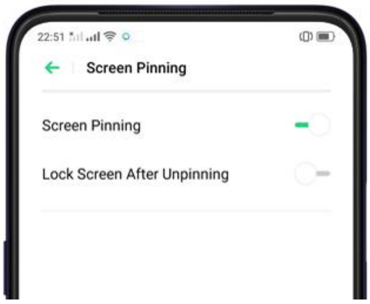
8.4. Advanced

8.4.1. Screen pinning

Screen Pinning temporally restricts the user from leaving the app or tasks or being interrupted by notifications. Once your app activates Screen Spinning, your phone is restricted to only display interface of this app, you cannot see notifications, access other apps, or return to the Home Screen, until your app exits this mode.

Activate Screen Pinning

Go to **[Settings]** > **[Additional Settings]** > **[Device & Privacy]**, scroll to the bottom of the screen and turn on [**Screen Pinning]**.



22:51

Hide Apps from the Home Screen

You can also hide the app on the homescreen and can only be viewed when entering the access number on the dial pad. It can be opened without encryption passcode verification. See Hide apps from Home Screen

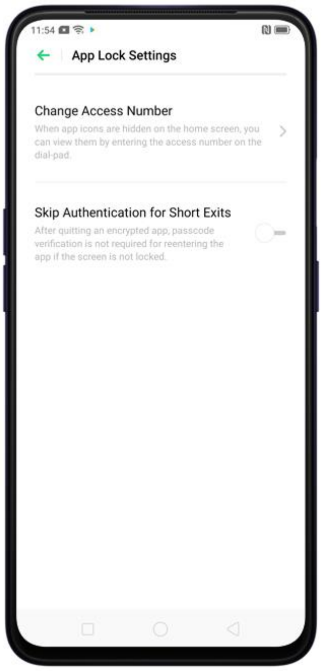
Managing encrypted apps

Go to [Settings] > [Security] > [App Lock] then tap ⚙ on the right top corner of the screen. You will be given options to manage the following:

- Change verification passcode
- Modify the security question
- Change access number

You can also enable the following:

- Use fingerprint for app encryption
- Skip authentication for short exits



Change Access Number

When app icons are hidden on the home screen, you can view them by entering the access number on the dial-pad.

Skip Authentication for Short Exits

After quitting an encrypted app, passcode verification is not required for reentering the app if the screen is not locked.

9. Share Internet connection and files

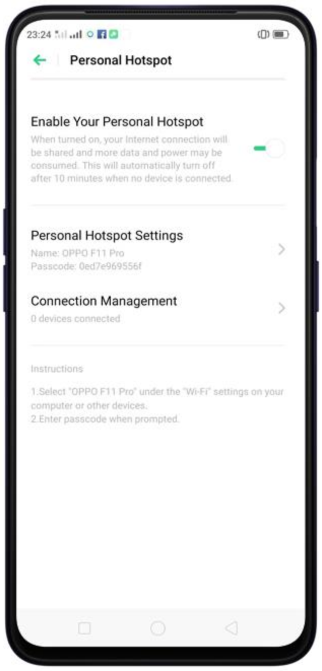
9.1.1. Tether your phone's Internet connection

Using tethering can make you share your phone's Internet connection with several devices, such as your computer, tablet or other gadgets. Tethering works when your phone is connected to the Internet via mobile data or Wi-Fi network.

Turn your phone into a personal hotspot

1. Go to **[Settings]** > **[Other Wireless Connections]** > **[Personal Hotspot]**, then switch the slider to green.
2. Set the hotspot name and password.
3. On another device, choose your hotspot from the list of available Wi-Fi networks.

Note: When a device is connected, a blue band appears at the top of the phone screen.

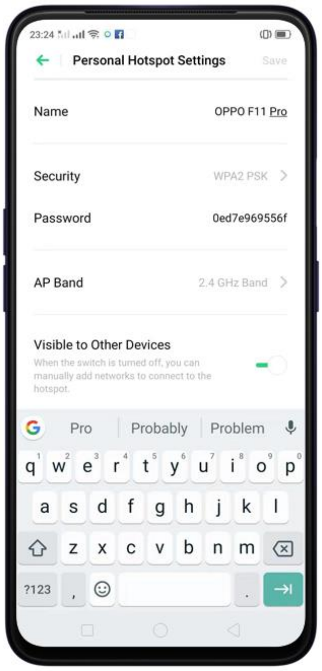


Enable Your Personal Hotspot
When turned on, your Internet connection will be shared and more data and power may be consumed. This will automatically turn off after 10 minutes when no device is connected.

Personal Hotspot Settings
Name: OPPO F11 Pro
Passcode: 0ed7e969556f

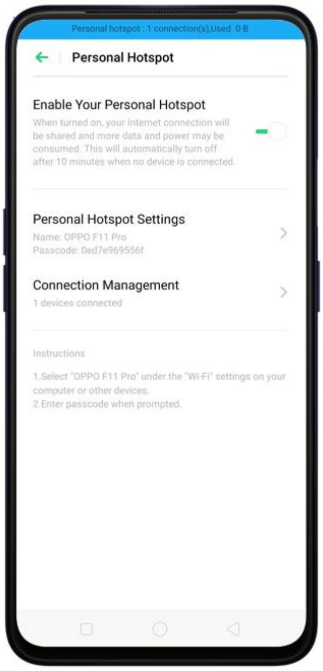
Connection Management
0 devices connected

Instructions
1.Select "OPPO F11 Pro" under the "Wi-Fi" settings on your computer or other devices.
2.Enter passcode when prompted.



Name: OPPO F11 Pro
Security: WPA2 PSK
Password: 0ed7e969556f
AP Band: 2.4 GHz Band

Visible to Other Devices
When the switch is turned off, you can manually add networks to connect to the hotspot.



Personal hotspot : 1 connection(s),Used 0 B

Enable Your Personal Hotspot
When turned on, your Internet connection will be shared and more data and power may be consumed. This will automatically turn off after 10 minutes when no device is connected.

Connection Management
1 devices connected

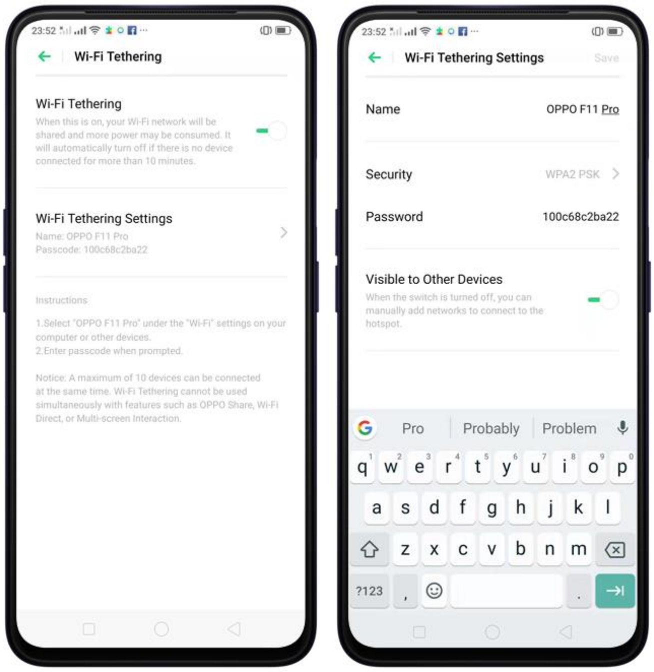
Instructions
1.Select "OPPO F11 Pro" under the "Wi-Fi" settings on your computer or other devices.
2.Enter passcode when prompted.

Use Wi-Fi Tethering

This makes your phone as a Wi-Fi router which basically has the same functionality to that of a traditional router which enables the sharing of internet to other Wi-Fi devices. See Tether your phone’s internet connection.

Use Wi-Fi Tethering

1. Go to [**Settings**] > [**Other Wireless Connections**] > and enable [**Wi-Fi Tethering**].
2. In [**Wi-Fi Tethering Settings**] you can change the name, manage security, and input passcode. Also, when **Visible to other Devices** is turned off, you can manually add networks to connect to the hotspot.



Wi-Fi Tethering

When this is on, your Wi-Fi network will be shared and more power may be consumed. It will automatically turn off if there is no device connected for more than 10 minutes.

Wi-Fi Tethering Settings

Name: OPPO F11 Pro
Passcode: 100c68c2ba22

Instructions

1.Select "OPPO F11 Pro" under the "Wi-Fi" settings on your computer or other devices.
2.Enter passcode when prompted.

Notice: A maximum of 10 devices can be connected at the same time. Wi-Fi Tethering cannot be used simultaneously with features such as OPPO Share, Wi-Fi Direct, or Multi-screen Interaction.

Wi-Fi Tethering Settings — Save

Name: OPPO F11 Pro
Security: WPA2 PSK
Password: 100c68c2ba22

Visible to Other Devices

When the switch is turned off, you can manually add networks to connect to the hotspot.

Note: Wi-Fi Tethering will automatically turn off if no device is connected for more than 10 minutes. This is to save energy. A maximum of 10 devices can be connected but cannot be used simultaneously with features such as OPPO Share, Wi-Fi Direct, or Multi-screen Interaction.

Use USB Tethering.

1. Connect your phone to your computer using the cable that came with it.
2. Go to **[Settings]** > **[Other Wireless Connections]** > **[USB Tethering]**, then switch the slider to green.

3. In your computer's Network preferences, choose your OPPO phone, then configure the network settings.

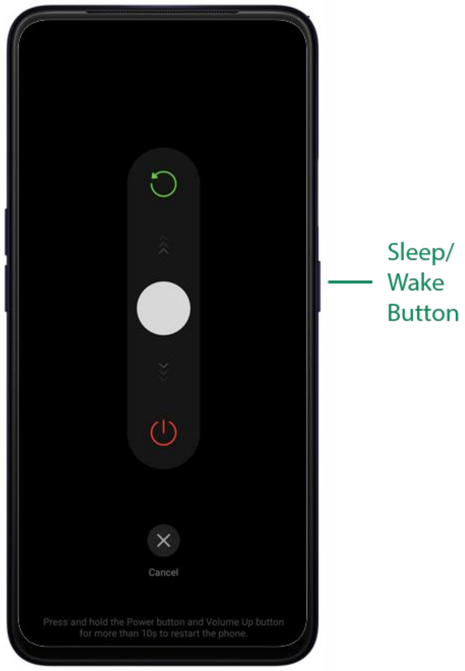
10. Restart, update, back up, and restore

10.1. Restart the phone

If something isn't working right, try restarting the phone.

Restart OPPO phone. Press and hold the Sleep/Wake button until the **Slide down to power off** message appears. Drag the power icon down to turn off the phone. To turn the phone back on, press and hold the Sleep/Wake button until you see the OPPO logo.



Press and hold the Power button and Volume Up button for more than 10s to restart the phone.

Force restart OPPO phone. If the phone is not responding, press and hold the Sleep/Wake and Volume Up buttons for at least 8 seconds until you see the OPPO logo.

10.2. Update ColorOS software

There are three ways to update your device.

Notice before doing the update.

- Plug your OPPO phone into power, or keep the battery level over 40%.
- The update process takes some time. Do not operate or power off your device during the process.
- DO NOT root the phone yourself, for that might cause damage to your system, and the warranty service will be terminated immediately.

Update your OPPO phone wirelessly

1. Connect to a working Wi-Fi or Mobile network. The system will automatically show new update if any. You can see a notification on the "System updates" icon, otherwise, it will show "It is already the latest version".

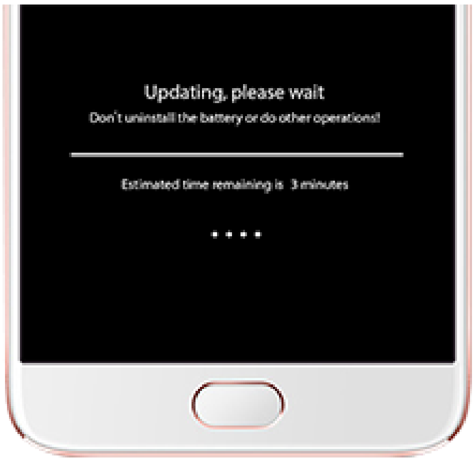
Features

2. Download the firmware. Download under a Wi-Fi network to avoid mobile consumption.

3. Tap **[System Updates]**. Your device will reboot and start updating, which will take a few minutes.



Updating, please wait
Don't uninstall the battery or do other operations!

Estimated time remaining is 3 minutes

10.3. Back up and restore the phone

10.3.1.Back up your phone

If you use your device on a regular basis, having a reliable backup is essential in case something goes wrong.

Use the built-in backup tool. Go to **[Settings]** > **[Additional Settings]** > **[Back up and reset]** and tap **[Backup & Restore]**. All your personal data, system data, and applications will be backed up to phone storage.

Connect your phone to a computer to create a backup on it. This is a common way to back up all your data. Don't disconnect your phone during the copy backup process.

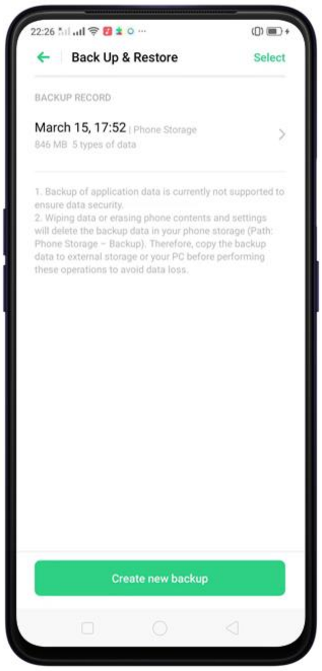
10.3.2.Restore data on your phone

There are various methods to restore data on OPPO smartphone. Select the corresponding restoration method according to the way you have made the backup.

Restore your OPPO smartphone from Local backup

Before you start, make sure that you have copied and saved the data on OPPO smartphone via **Local backup.**

1. Go to **[Settings]** > **[Additional Settings]** > **[Back up and Reset]** and tap **[Backup & Restore]**. You can find the data you want to restore according to its backup time.



March 15, 17:52 | Phone Storage
846 MB 5 types of data

1. Backup of application data is currently not supported to ensure data security.
2. Wiping data or erasing phone contents and settings will delete the backup data in your phone storage (Path: Phone Storage – Backup). Therefore, copy the backup data to external storage or your PC before performing these operations to avoid data loss.

2. Select data to be restored, including Contacts, Messages, Call history, system data and Apps and their data. Then start the restoration.

The Cloud Backup Items for "OPPO F11 Pro" Are Restored

Transfer your data with Clone Phone

If you have switched to a new OPPO phone, you can transfer your data from old phone to your new OPPO phone through **Clone Phone**.

Restore your OPPO smartphone data from third-party Apps

OPPO does not recommend you back up, transfer or restore data via third-party APPs, for they may be in conflict with OPPO system, leak personal information, or cause other safety problems.

10.3.3.Reset the phone

Resetting your OPPO phone will reset the phone back to its original factory settings, and will permanently erase all your personal data. You can do Factory data reset if your phone starts to lag or there's a delay in navigating, has too much junk files and caches, or has issues with system or applications.

Before you do factory reset, back up all the needed data.

Reset your phone to factory settings

Go to **[Settings]** > **[Additional settings]** > **[Back up and Reset]** > **[Reset to Factory Settings]**, choose an option available for factory data reset.

Note: Any reset option cannot be revoked once it is operated.

Reset System Settings Only

This option will reset all system settings without deleting any data or media files.

Clear Downloaded Apps and App Data

This option will delete all third-party apps and app data. But the data saved by the user will be kept such as photos, music, and videos.

Clear All Data

Through this option, all data of on you device will be cleared including contents, settings, photos, and music. It will reset to its inactivated initial state, which is the factory state.

Clear the Contacts and Call History on This Phone

By choosing this option, all the contacts and call history on the phone will be erased. Only the contacts on the SIM card will be preserved. Other data on your device will not be affected.

Clear the SMS and MMS Messages on This Phone

By choosing this option, all the SMS and MMS messages on the phone will be erased. Only the SMS messages on the SIM card will be preserved. Other you're your device will not be affected.

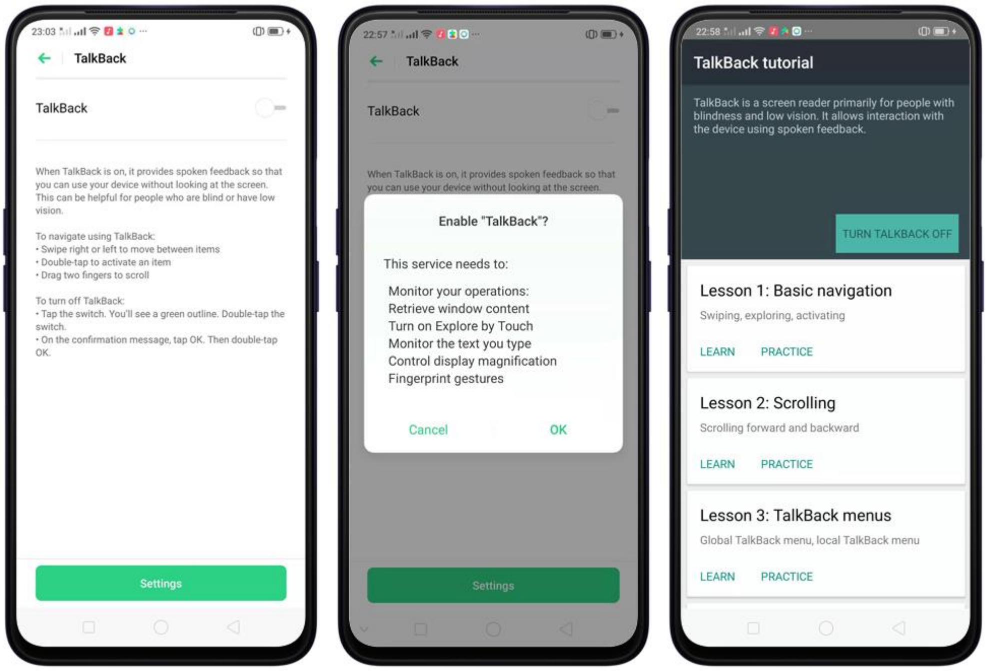
11. Barrier-free

11.1. TalkBack

TalkBack helps blind and vision-impaired users to interact with the phones more easily. It uses spoken word, vibration, and other audible feedback to let you know what's on your screen, what you're touching, and what you can do with it.
Turn TalkBack on. Go to **[Settings]** > **[Additional Settings]** > **[Accessibility]** and enable TalkBack.



23:03
TalkBack
TalkBack

When TalkBack is on, it provides spoken feedback so that you can use your device without looking at the screen. This can be helpful for people who are blind or have low vision.

To navigate using TalkBack:
• Swipe right or left to move between items
• Double-tap to activate an item
• Drag two fingers to scroll

To turn off TalkBack:
• Tap the switch. You'll see a green outline. Double-tap the switch.
• On the confirmation message, tap OK. Then double-tap OK.

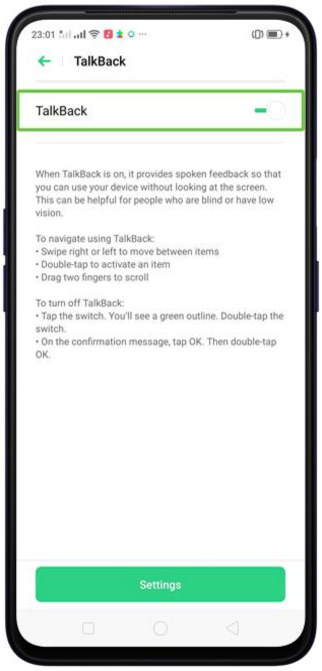
Turn Talkback off. Go to **[Settings]** > **[Additional Settings]** > **[Accessibility]** >

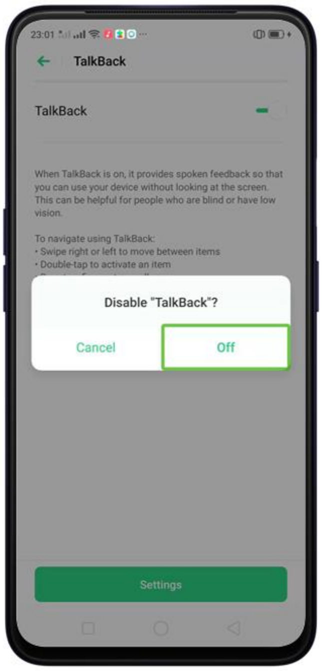
[TalkBack], switch the slider to white, then tap **Off**.



When TalkBack is on, it provides spoken feedback so that you can use your device without looking at the screen. This can be helpful for people who are blind or have low vision.

To navigate using TalkBack:
• Swipe right or left to move between items
• Double-tap to activate an item
• Drag two fingers to scroll

To turn off TalkBack:
• Tap the switch. You'll see a green outline. Double-tap the switch.
• On the confirmation message, tap OK. Then double-tap OK.



When TalkBack is on, it provides spoken feedback so that you can use your device without looking at the screen. This can be helpful for people who are blind or have low vision.

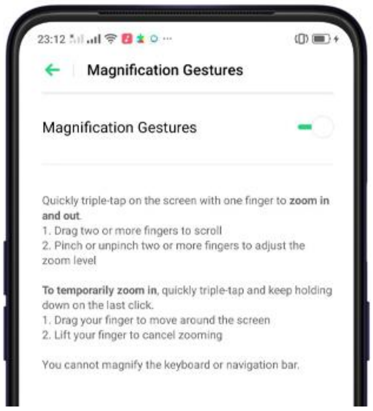
To navigate using TalkBack:
• Swipe right or left to move between items
• Double-tap to activate an item

Disable "TalkBack"?

11.2. Magnification Gestures

Magnification gestures work similarly to the full-screen magnifiers, which allows users to zoom in and pan the whole screen to get a closer look at screen content.

Enable magnification gestures. Go to **[Settings]** > **[Additional Settings]**> **[Accessibility]** and enable **[Magnification Gestures]**.



Quickly triple-tap on the screen with one finger to **zoom in and out**.
1. Drag two or more fingers to scroll
2. Pinch or unpinch two or more fingers to adjust the zoom level

To temporarily zoom in, quickly triple-tap and keep holding down on the last click.
1. Drag your finger to move around the screen
2. Lift your finger to cancel zooming

You cannot magnify the keyboard or navigation bar.

- Quickly triple-tap the screen to zoom in and out. The triple-tapping does not work well on the keyboard or on the navigation bar - if you have the magnifier running while the keyboard is shown, only the area above the keyboard will be magnified.
- Drag two or more fingers across the screen to pan across the screen.

- Pinch your fingers together or apart to adjust the zoom level.

12. Safety, handling, and support

12.1. Health & Safety

12.1.1.Using Environment

Keep in mind the following rules. Switch off your phone when it is prohibited, or might cause disturbance or danger.

1. The ideal phone working temperature is 0° C to 35° C and 35% to 85% humidity. A too high or too low temperature might affect the performance or cause damage~~s~~. The ideal phone storage temperature is -20° C to 45° C.

2. Your phone might interfere with electronic and medical equipment. Obey the related rules and switch off your phone in these places.

3. Try not to use your phone in weak signal areas or near high-precision electronic devices. Radio interference might lead to malfunction or other issues in electronic devices, especially pay attention when near the following devices: hearing aids, pacemakers and other medical devices, fire detectors, automatic doors and other automatic control devices.

4. In rare cases, the phone might interfere with the electronic systems in certain cars, such as the ABS anti-lock brakes and the air bag. Consult your network operator or car manufacturer before connecting the phone.

5. Before connecting to other devices, carefully read the user manual for more detailed, accurate, and safety instructions. Do not connect to incompatible products.
6. Do not use your phone in rain, or near washbasins or other wet locations.

12.1.2.Battery Safety

Battery Precautions

1. Do not disassemble the built-in lithium polymer battery yourself, otherwise, it might cause battery leakage, overheat, explosion, and fire. Go to an OPPO designated after-sales service center if battery replacement is needed.
2. Do not puncture or pierce the battery with hard objects (e.g., needles and tacks) to avoid battery leakage.
3. Liquid in the battery is harmful to your skin. If liquid can be seen leaking from the battery, do not attempt to touch it. If the liquid contacts with the skin and eyes rinse immediately with water and go to a doctor if needed.
4. Do not expose the battery to extreme ambient temperatures, fire, wet locations, and direct sunlight.
5. If the battery sends out strange smell, turn off your phone immediately, and send it to an authorized service provider for battery replacement. Do not attempt to disassemble or replace the battery yourself.
6. Do not continuously charge the battery over 12 hours.

Battery Life Tips

1. **Use OPPO original accessories.** Use OPPO original charger (power adapter and USB cable) that matches your phone model. Charging with third-party or counterfeit charger accessories might impact battery lifespan or even cause security incidents.
2. **Charge at a suitable temperature.** The ideal charging temperature is 5° C to 40° C. Battery life might temporarily shorten in low-temperature conditions, or irreversibly damage when temperature is too high. The battery should be charged within the ideal temperature range to avoid decreased battery performance and standby time.
3. **Turn off phone features when not in use**. Using features such as Bluetooth, Wi-Fi, and GPS or keeping them active in the background may drain the battery significantly. Turn them off when not in use to save the battery.

Dimming your screen and reducing the screen timeout setting can also preserve the battery life.

4. **Do not use when charging.** Your phone might quickly get warm or even cause damage if you use it a lot during charging.
5. **Do not fully drain your phone's battery.** Charge your phone when your battery level goes down to 10%. If phone's battery is fully drain, the battery could fall into a deep empty/drain state, which will cause it to be slightly damaged.
6. **Store the phone long term.** If you plan to store the phone for a long time, charge it to 60% or above every month.
7. **External environment.** Avoid exposing your phone battery to high or low temperature, humid environment or sun exposure.

12.1.3.Charger Usage Notes

1. Only use the charger specified by OPPO.
2. Charging voltage should be consistent with that specified on the charger. Using mismatched voltage might cause leakage, fire, and damages.
3. Do not use a power socket that is incompatible with the charger. Make sure the charger is plugged in firmly to avoid any fire hazard.
4. Do not charge your phone with a partially damaged charger, for that could result in electric shock, fire or other damages.
5. Do not charge your phone near washbasins or other water containers, or in wet locations such as bathrooms. Take caution to not spill any food or liquid on your phone or charger. Do not touch chargers, cables or power sockets with wet hands. In case the charger gets wet, unplug all cables, allow it to dry thoroughly before charging again.
6. Do not disassemble or modify the charger or cables yourself.
7. Do not place heavy objects on the charger, for that might cause electric shock and fire.
8. Before cleaning the charger, unplug all cables (hold and pull the plug instead of pulling the cable, otherwise the cable will be ripped off).
9. Do not charge your phone when there is lightening or thunderstorm. Do not make phone calls while charging.

10. Avoid exposing your charger to following conditions: exposing to direct sunlight, temperatures lower than 5° C or higher than 40° C, damp and dusty places or that with excessive vibrations (might cause breakdowns), places near electrical appliances such as TV and radio sets (might cause interference to images and sound).

12.1.4. Traffic Safety

Use both hands when driving, and give full attention to driving and on the road. If you decide to use your phone while driving or riding a bicycle, keep in mind the following conditions:

- Safety should always come first while driving or riding a bicycle. Make sure to follow the related regulations in the area or country.
- Keep your eyes on the road. If you get an incoming call at an inconvenient time, let your voicemail answer it for you, or answer with a Bluetooth headset.
- An air bag in your vehicle inflates with great force. Do not store your phone or any of its accessories in the area over the air bag or in the air bag deployment area.
- Do not rely solely on the map on your phone when searching for locations, buildings, directions, and distances. Map routes and compass change as information provided by the service provider changes, so the map might be incorrect, incomplete or unsupported.
- Do not ship the phone~~,~~ with its components or accessories in the same compartment with flammable liquids, gases or explosives

12.2. Maintenance and Repair

12.2.1. Phone Cases

Keeping your phone protected from damage should be pretty important to you. The phone case that come along with your phone can effectively mitigate your concerns.

OPPO original phone case is made of TPU material, which is lightweight and soft and helps keep the original 'feel' of the phone since the case is a tight-fitting overlay. It does a good job of protecting against drops and shock damage on the corners and rear of your phone, also can reduce the damage caused by extreme temperature, liquid and dust invasion, etc.

12.2.2. Screen Protector

OPPO provides you with an original HD clear screen protector made of PET material, which is a thin piece of electro-conductive film that self-adheres to your screen. It protects your screen from cracking, also does offer resistance to scratches, finger prints, and abrasions. Besides, OPPO screen protector ensures high-definition and sensitiveness of the screen, which will not affect the screen display quality.

12.2.3. Maximize battery life and lifespan

Note: Rechargeable batteries have a limited number of charge cycles and may eventually need to be replaced. It is normal for the battery to lose its capacity over time, but you can do the following to maximize its life and lifespan.

Use OPPO original accessories. Charge the phone with OPPO original power adapter and USB cable. Charging with third-party charger accessories might impact battery lifespan or even cause security incidents.

Use at a suitable temperature. OPPO smartphone battery is designed to have a good performance in a wide range of ambient temperatures, with 16° C to 25° C as the ideal comfort zone. When temperature is higher than 45°C, battery capacity will damage irreversibly, and phone might even short-circuit and burn.

Do not use when charging. Programs such as long-time calls, games or online videos will make phone get warm quickly.

Do not fully discharge your phone's battery. Charge your phone when your battery level goes down to 10%. If phone's battery is fully discharged, the battery could fall into a deep discharge state, which will cause it to be slightly damaged.

Store the phone long term. If you plan to store the phone for a long-term, charge it to 60% or above every month.

External environment. Avoid exposing your phone battery to humid environment or sun exposure.

Keep a good using habit. Using features such as Bluetooth, Wi-Fi, and GPS or keeping them active in the background may drain the battery significantly. Turn them off when not in use to save the battery. Dimming your screen and reducing the screen timeout setting can also preserve the battery life.

Do not charge with a portable power bank frequently. If a power bank supplies current which is above your phone battery's capacity, then it will cause damage to your battery gradually. Make sure the power bank you buy is of good quality and has power ratings which are suitable for your phone, basically match the current to the wall charger you use.

12.2.4. Keep Clean

Your mobile phone could be a hotspot for bacteria, so clean your phone is of great importance. Follow these steps:

1. To clean your phone, unplug all cables and turn it off first.

2. Dip the included cleaning cloth or a soft, slightly damp, lint-free cloth in distilled water or low concentration alcohol, and shake or squeeze to remove any excess liquid.

3. Slightly wipe across your phone. Avoid getting moisture in openings.

4. Gently wipe the screen with the dry part of the microfiber cloth, but don't try to pick up all the excess water if it means pressing hard.

Do not attempt to dry your phone with an external heat source, such as a hair dryer. If impurities cannot be cleaned up, contact OPPO Service Center for professional assistances.

12.2.5. Keep dry and solve water damage

Do not use your phone in rain, or near washbasins or other wet locations. Take care not to spill any food or liquid on your phone. In case your phone gets wet, follow these emergency measures:

1. Take your phone out of the liquid immediately, unplug all cables and turn off your phone.
2. If your phone has a removable battery, remove it.
3. Use a tissue or soft cloth to thoroughly adsorb water stains or liquids on the surface of your phone, and gently shake the phone in the opposite direction of liquid inflow.
4. Let your phone dry thoroughly before turning it on again. Avoid drying your phone with an external heat source, such as a hot air hair dryer.

If your phone has a serious water damage, take your phone, warranty card and proof of purchase to a nearby OPPO Customer Center for repairs at once.

12.2.6. Use connectors, ports, and buttons.

Never force a connector into a port for that might cause damage, which is not covered by warranty service. Check for obstructions on the port. If the connector and port don't join with reasonable ease, they probably don't match. Make sure that the connector matches the port and that you have positioned the connector correctly in relation to the port.

12.2.7. Other information

Mobile phones are perishable items, use with care. The following instructions might help to protect your phone:

1. Do not drop your phone or let it receive a substantial impact.
2. Do not place your phone in a microwave oven or other high voltage equipment, otherwise, it might cause damages, fire or explosion.
3. Do not leave the phone in hot, humid, or dusty environments. This may cause the phone to malfunction.

4. Your phone contains small parts, which may present a choking hazard to small children. Keep your phone and its accessories away from small children.
5. Do not paint your phone. Paint will block the sensors and lead to phone disoperation.
6. Dirty sockets might cause poor contact or electrical leakage. Regularly clean the power socket.
7. Do not take out the SIM or SD card when transmitting or saving information, otherwise, some important information might be lost.
8. Use only the supplied or approved antenna for replacement. Modified accessories might damage the phone or violate administer regulations of radio devices.

Note:

Read all safety information carefully before using the phone to ensure personal safety and proper use. Consumable parts (such as the battery and earphone) possess different warranty periods from your phone. Check with your warranty receipt for details.

12.3. FCC Compliance Statement

FCC Statement

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Note

The manufacturer is not responsible for any radio interference caused by unauthorized modifications to this product. Such modifications could negate the user’s authority to operate the product.

This product has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. Using this product can radiate radio frequency energy and, if not installed and used in accordance with the instructions, it may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in some conditions. If this product does cause harmful interference to radio or television reception itself, follow one or more of these measures to correct that:

- Reorient or relocate the receiving antenna.
- Keep a longer distance between the product and receiver.
- Plug the product and receiver into outlets of different circuits.
- Consult the dealer or an experienced radio/TV technician for help.

FCC Caution

▸ Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to use the product.

▸ The antenna(s) used for this transmitter must not be co-located or operated in conjunction with any other antenna or transmitter.

▸ The country code selection is for non-US model only and is not available to all US models. Per FCC regulation, all Wi-Fi products marketed in US must fixed to US operation channels only.

▸ Operations in the 5.15-5.25 GHz band are restricted to indoor usage only.
